Chytrids (11 IN) vs Mucoromycota (11 OUT): enrichment of novelty candidates (diamond pairwise, nf_NovInvenio run 2026-10-11)

A 4,868 candidates in 11 IN species

B Pfam families enriched in candidates (primary; family units on both sides)

2228 terms tested; 140 at FDR<0.05; annotated units: 1459 cand. / 29351 all

C GO terms (secondary; UniProt computational evidence)

4450 terms tested; 300 at FDR<0.05; annotated units: 1157 cand. / 25791 all

Annotation: UniProt reference proteomes (Pfam, InterPro, GO); IN species without annotation contribute no annotated units. Universe: all proteins of the IN proteomes. Family units: candidate families from the pipeline; background clustered with mmseqs (0.3 id, 0.8 cov, cov-mode 0). One-sided hypergeometric; BH within each vocabulary. Bars: FDR<0.05 and k>=3 candidate units. Labels: k = candidate units with term / all units with term.
