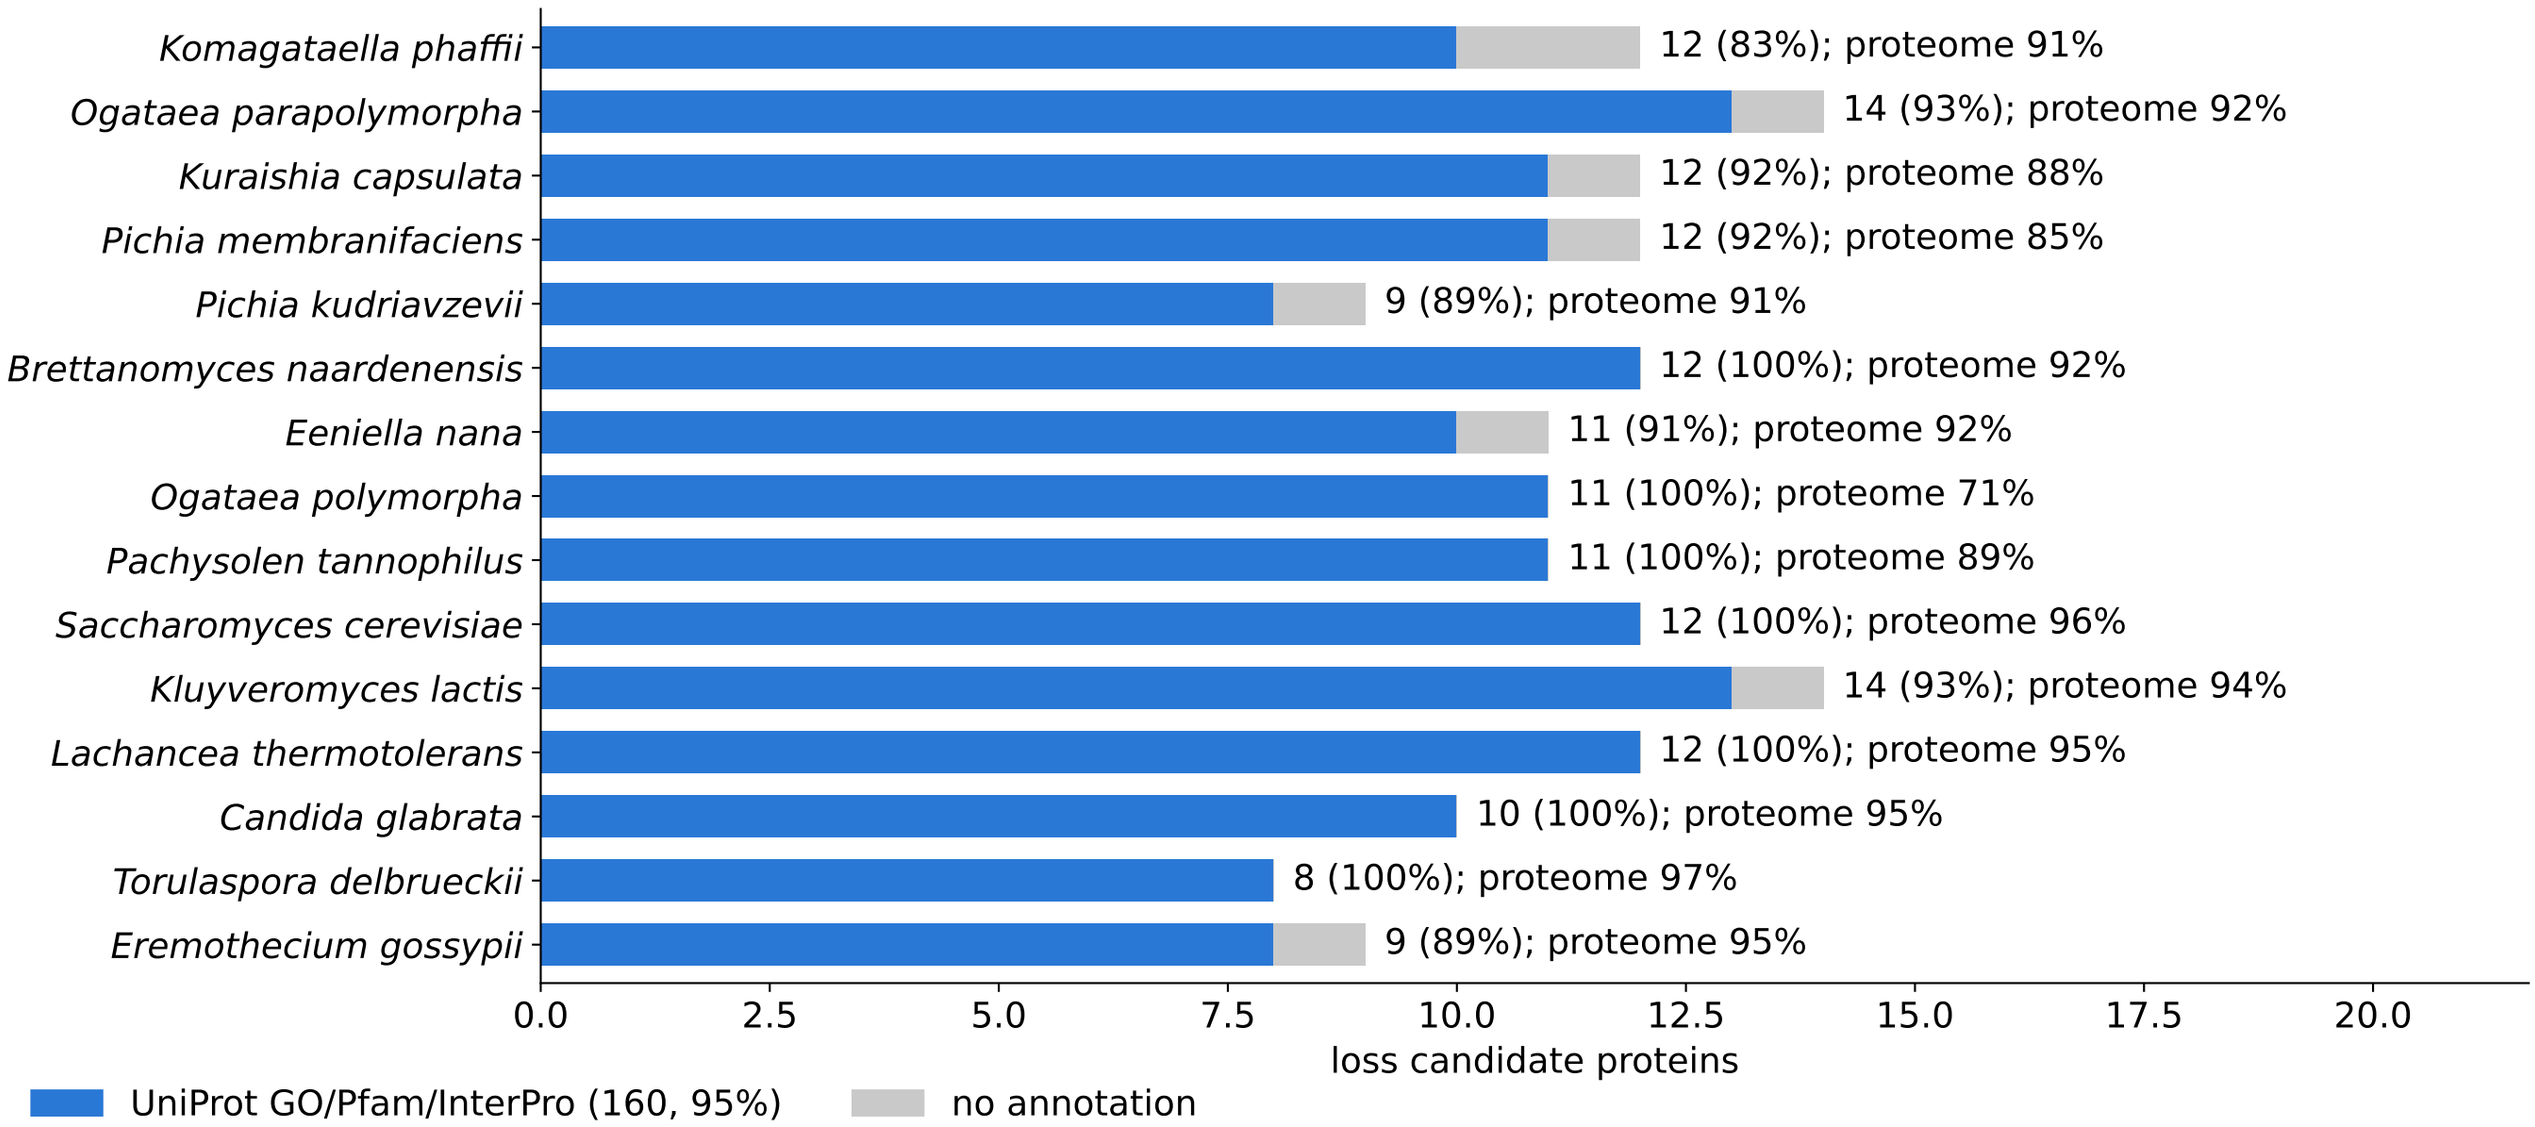
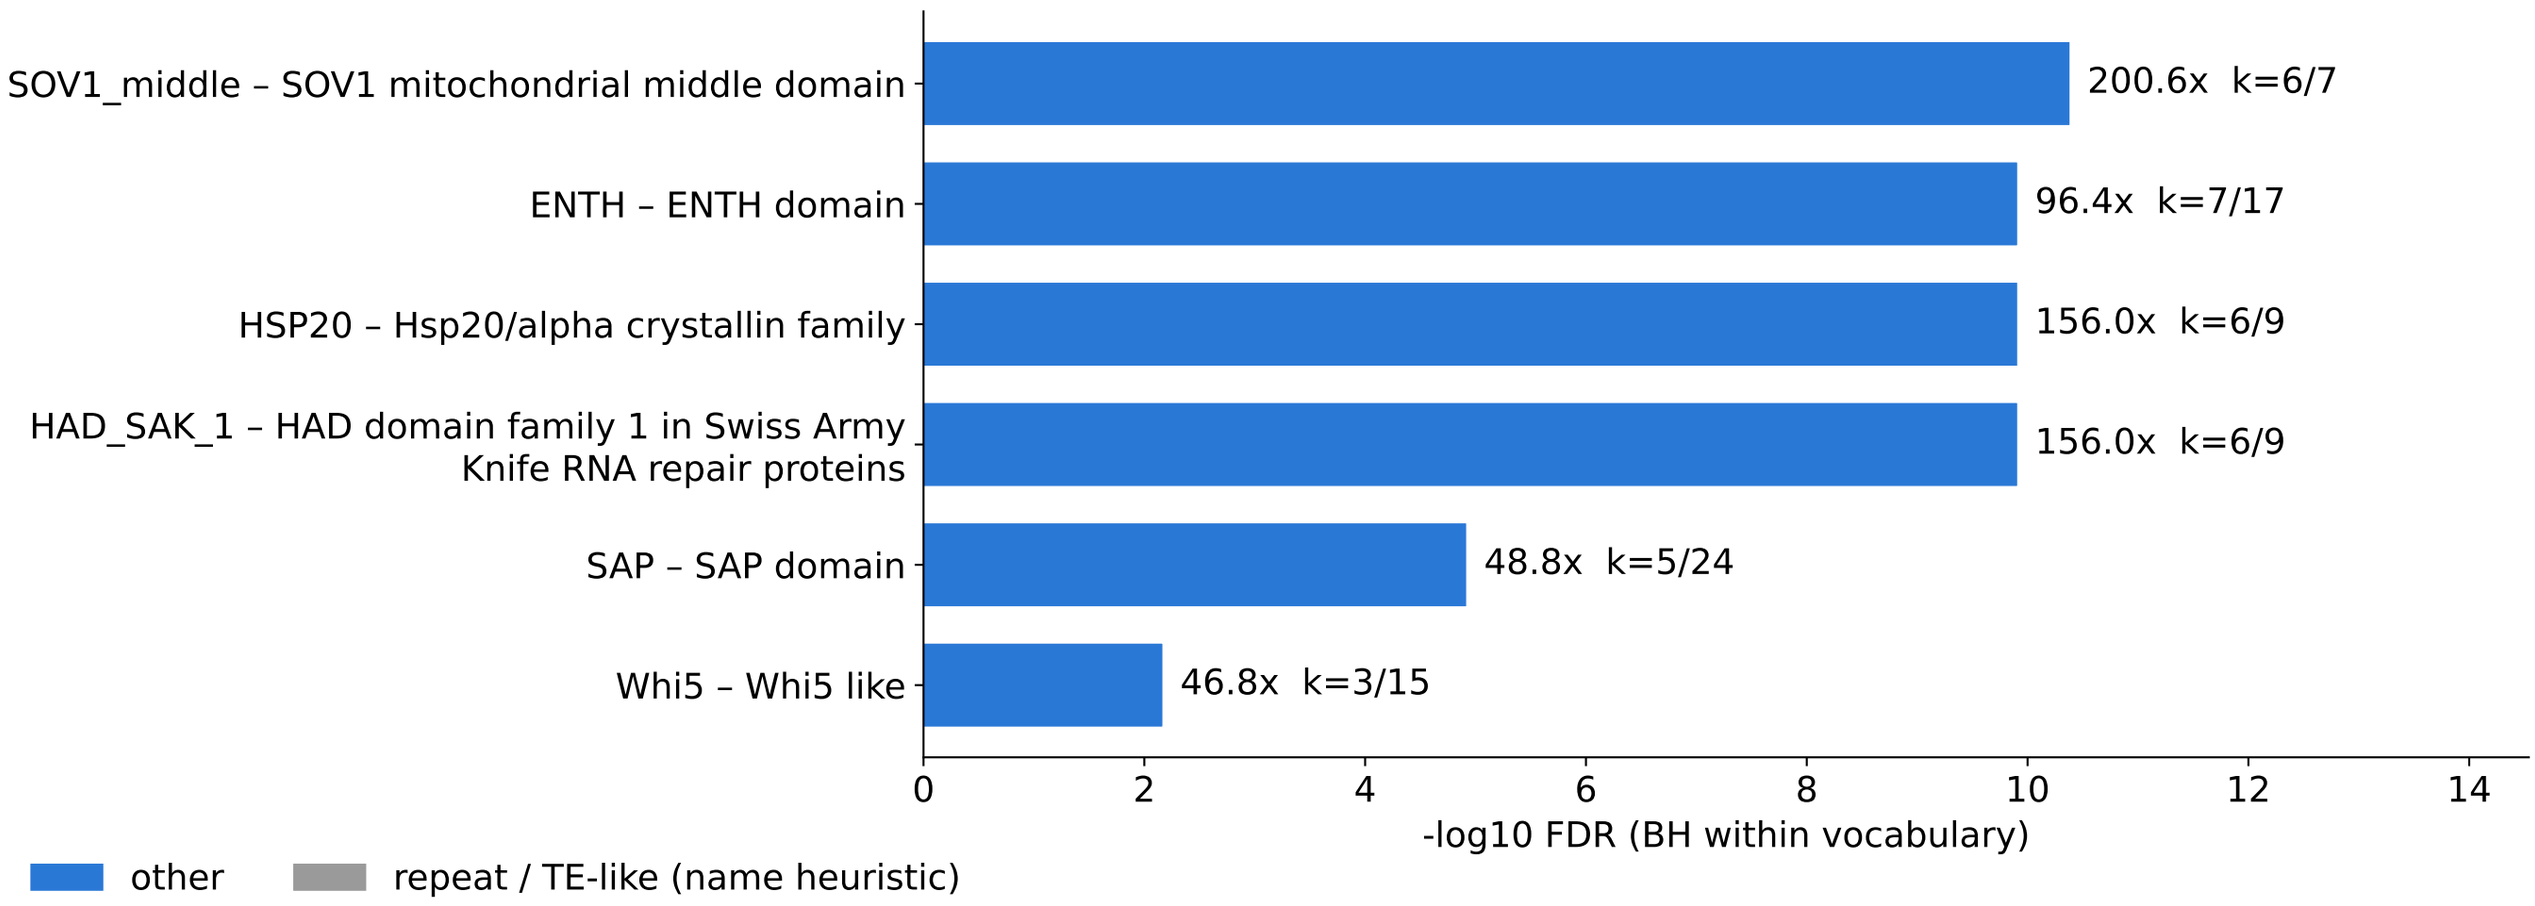
Pichiales (15 OUT) vs Serinales (18 IN): enrichment of loss-direction candidates (present in >=0.75 of OUT, absent from all IN; diamond pairwise)

A 169 candidates in 15 OUT species



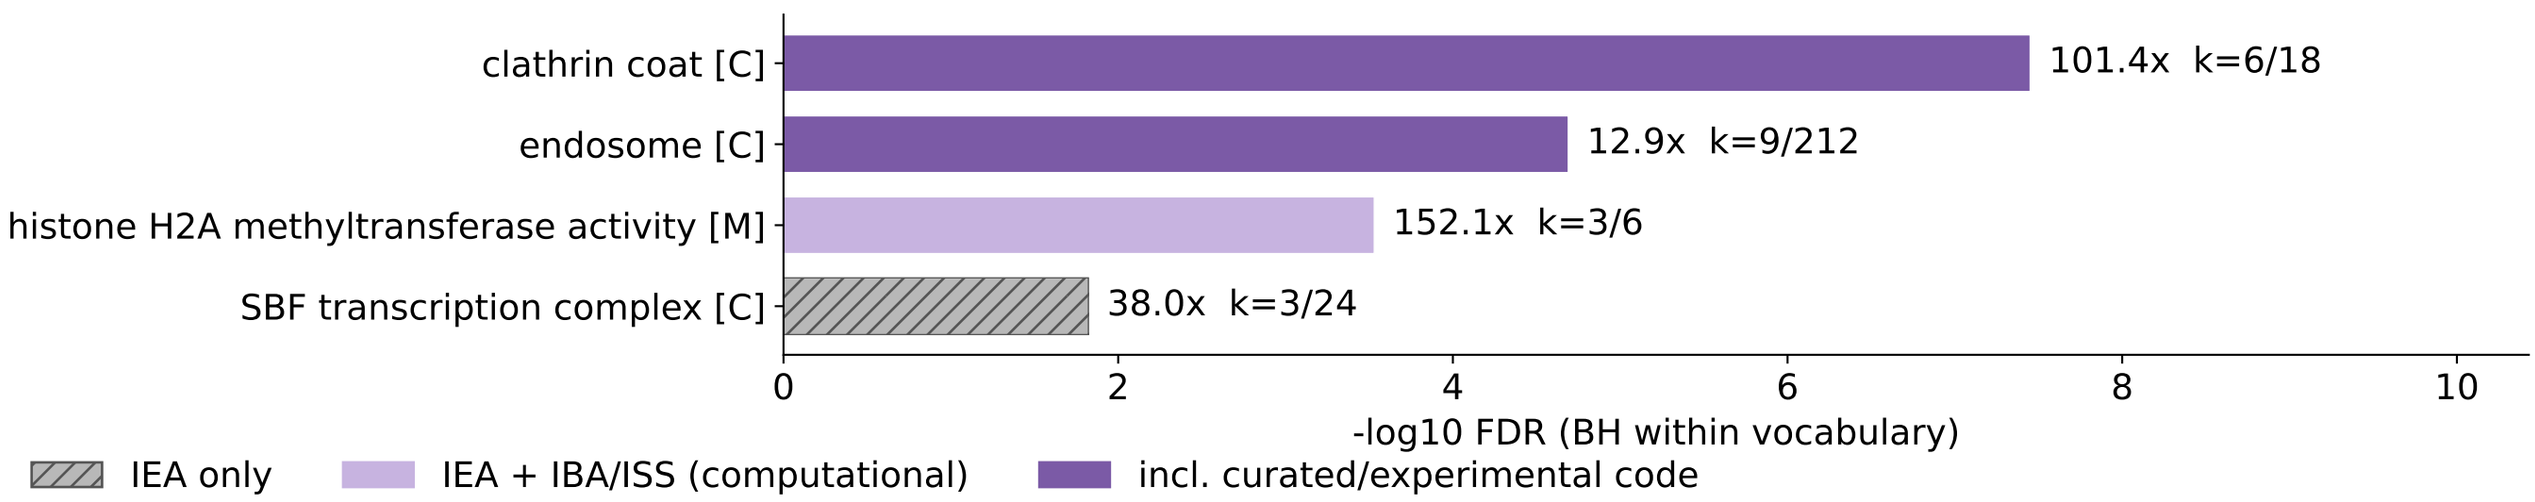
B Pfam families enriched in candidates (primary; family units on both sides)

1248 terms tested; 8 at FDR<0.05; annotated units: 61 cand. / 14277 all



C GO terms (secondary; UniProt computational evidence)

4490 terms tested; 30 at FDR<0.05; annotated units: 43 cand. / 13082 all



Annotation: UniProt reference proteomes (Pfam, InterPro, GO). Universe: all proteins of the 15 OUT proteomes. Family units: loss-candidate families from the pipeline (mmseqs on loss_candidates.fa); background clustered with mmseqs (0.3 id, 0.8 cov, cov-mode 0). One-sided hypergeometric; BH within each vocabulary. Bars: FDR<0.05 and k>=3 candidate units. Loss candidates: 169; annotated fraction 0.9467.
