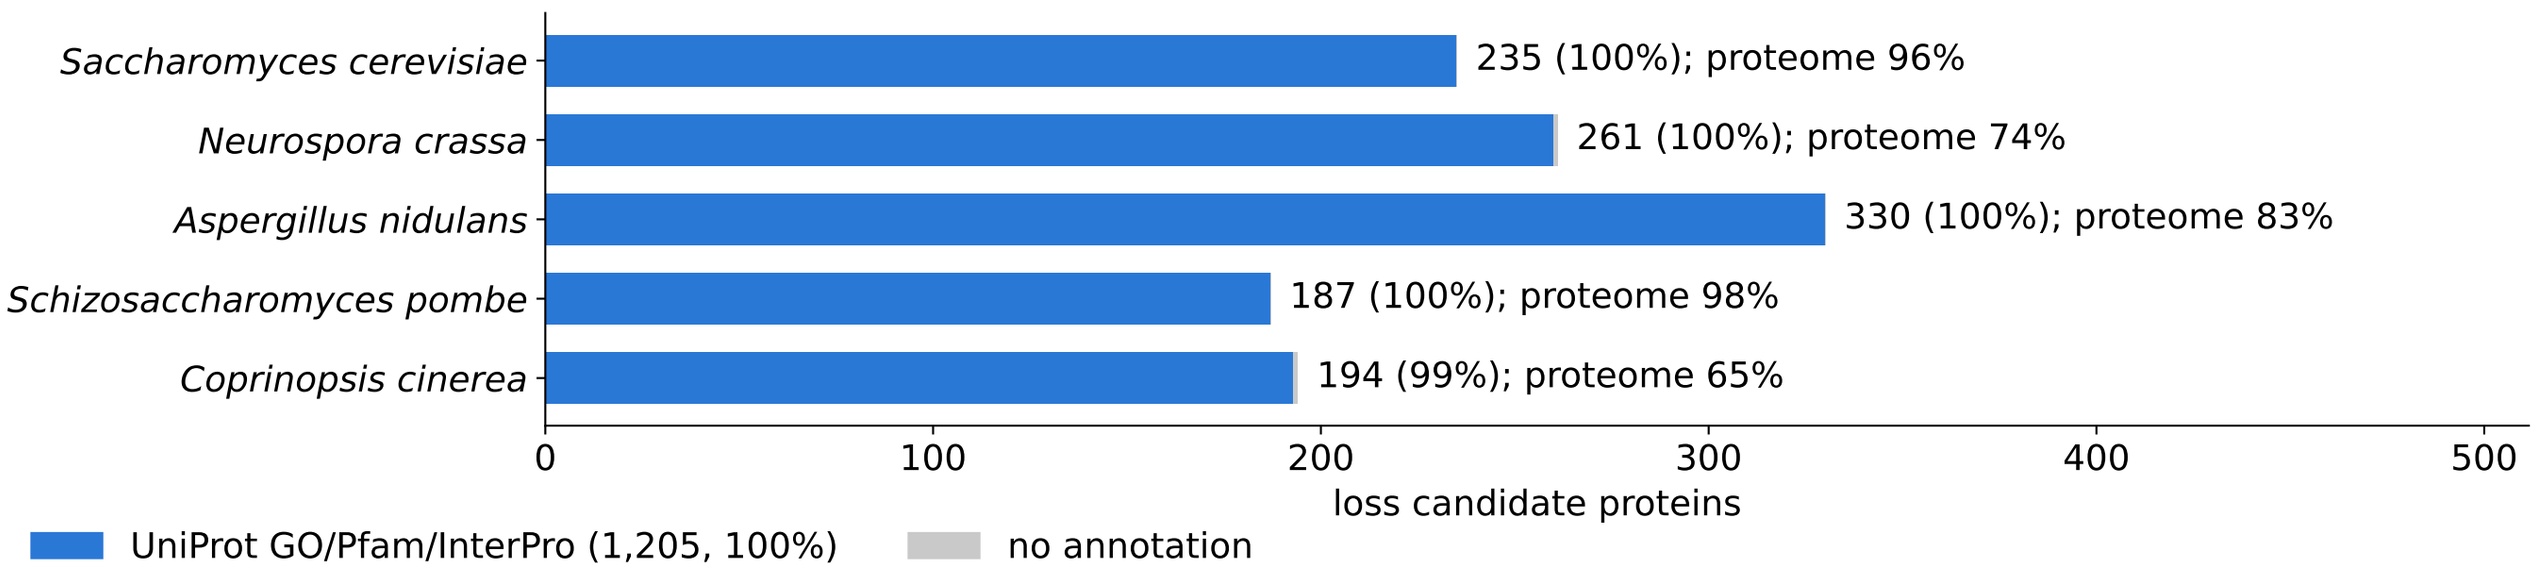
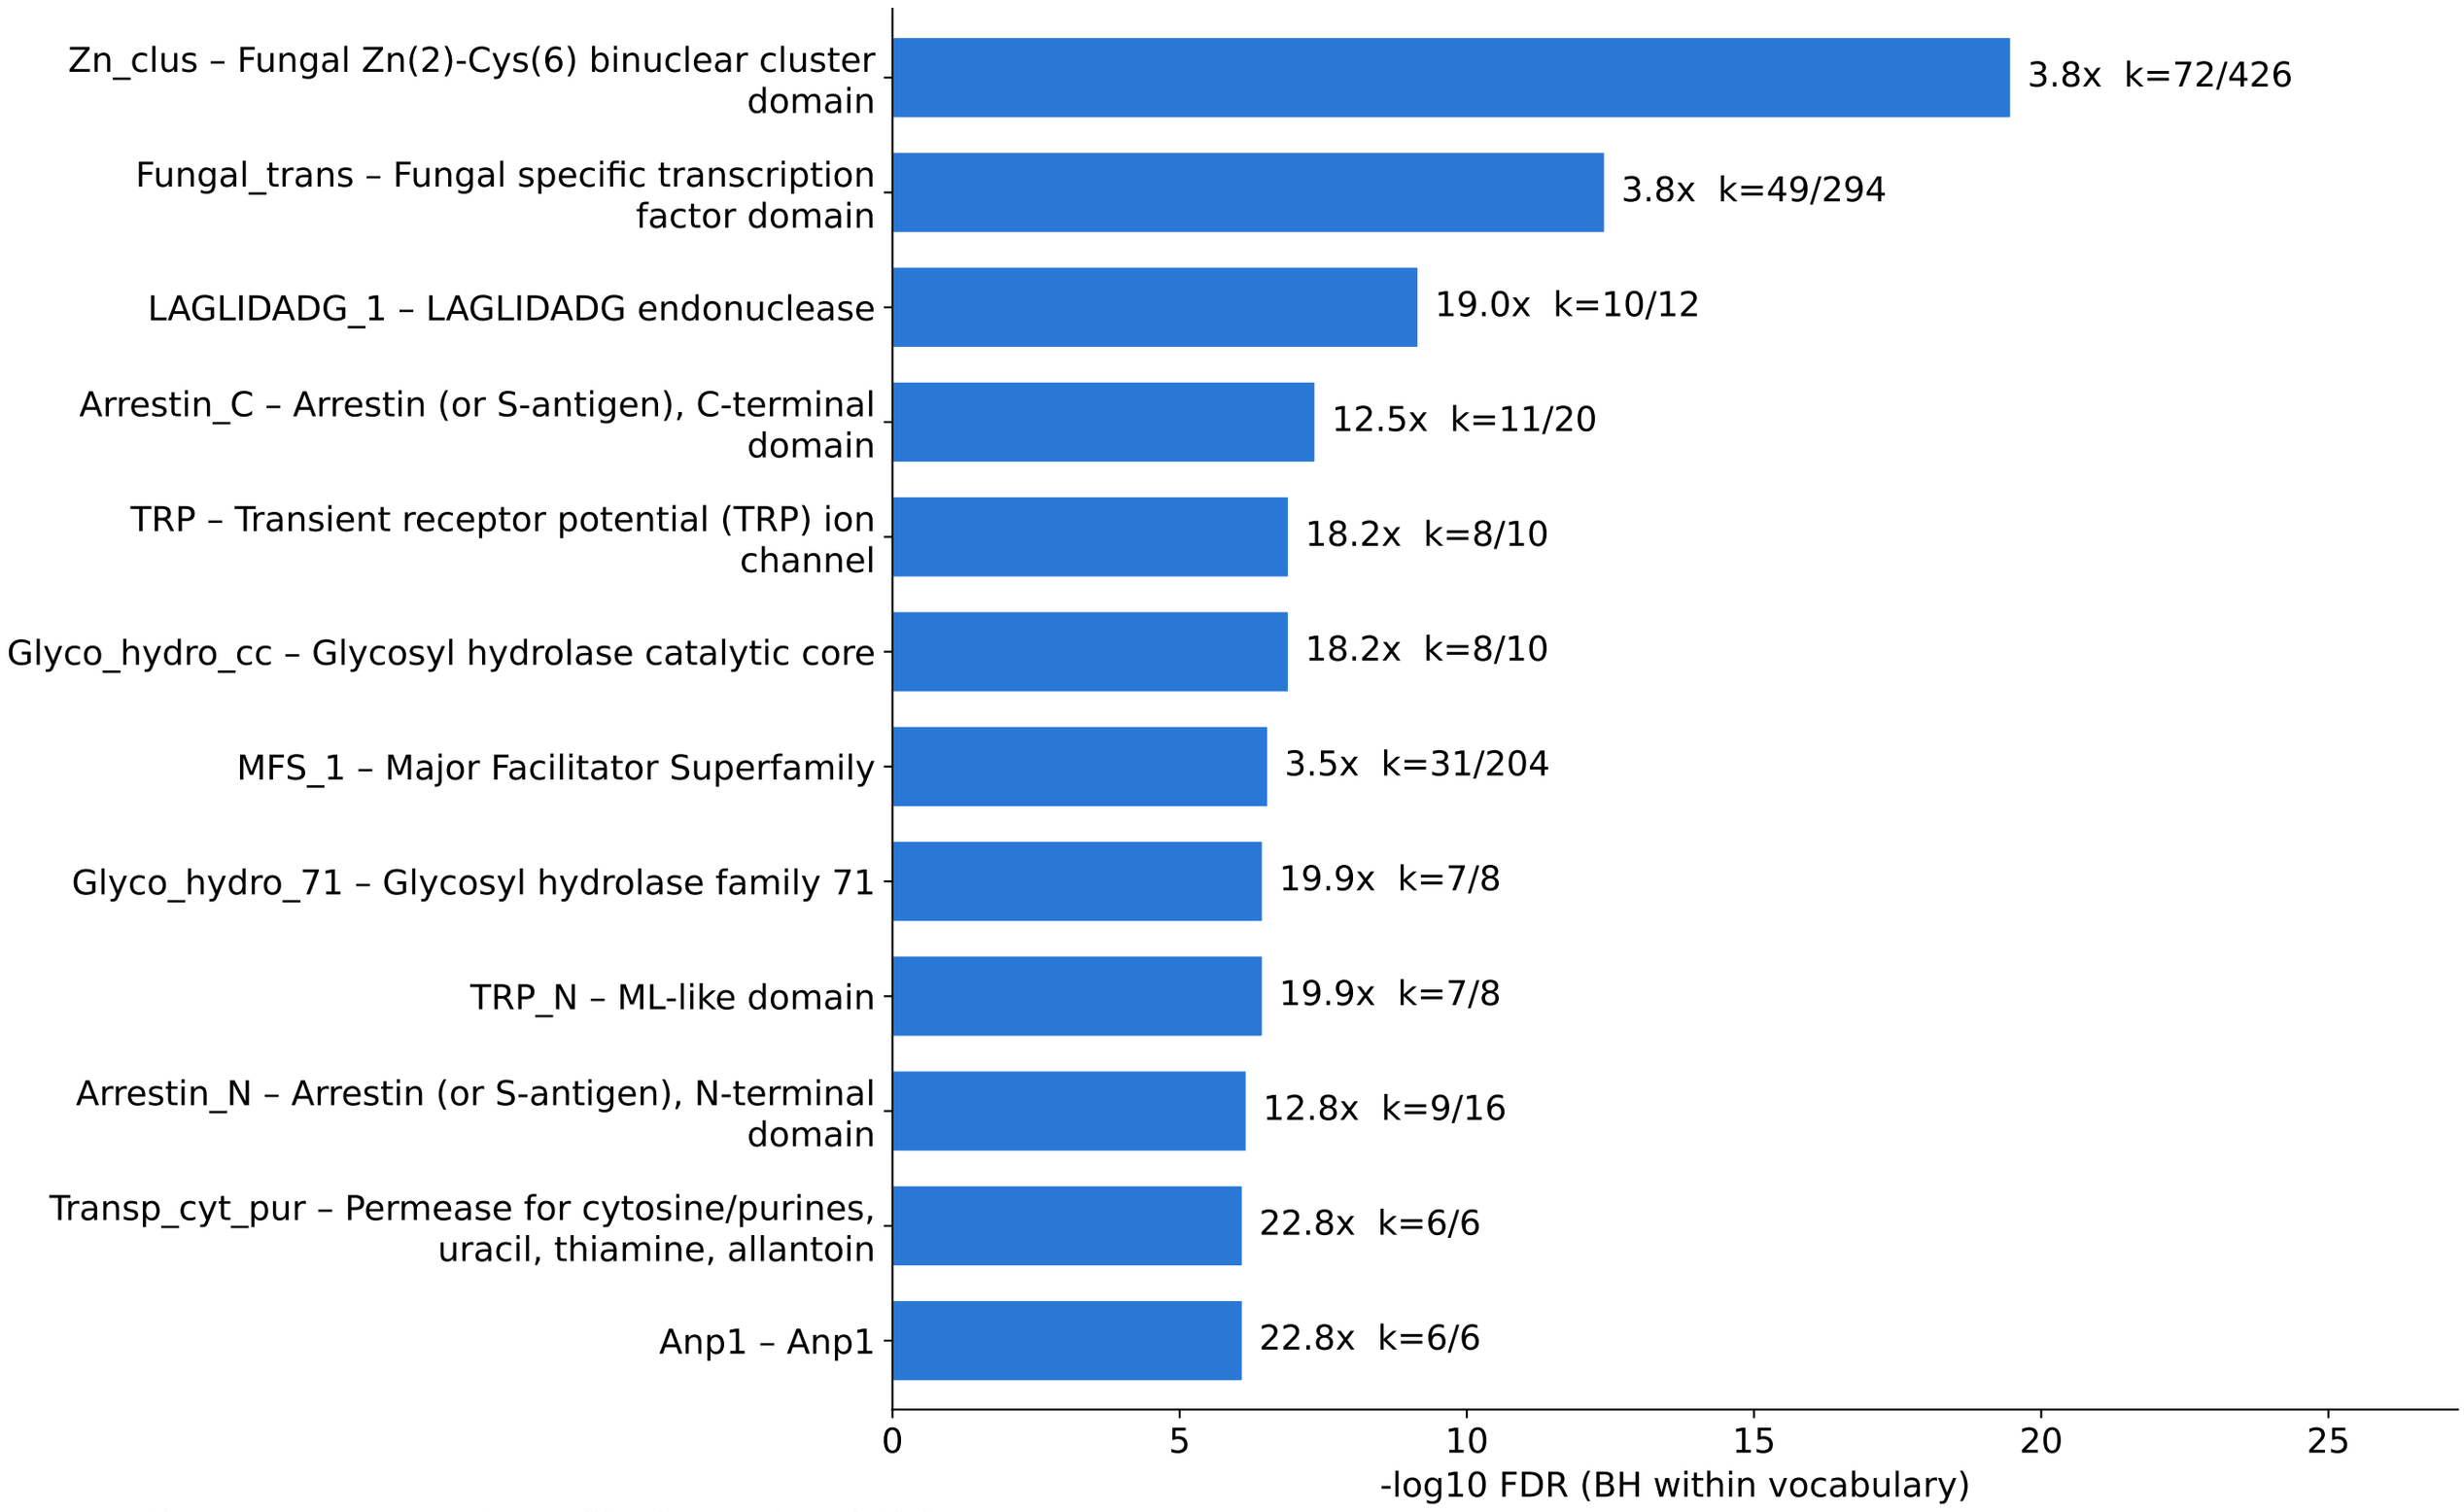
Dikarya (5 OUT) vs zoosporic fungi (4 IN): enrichment of loss-direction candidates (present in >=0.75 of OUT, absent from all IN; diamond pairwise)

A 1,207 candidates in 5 OUT species



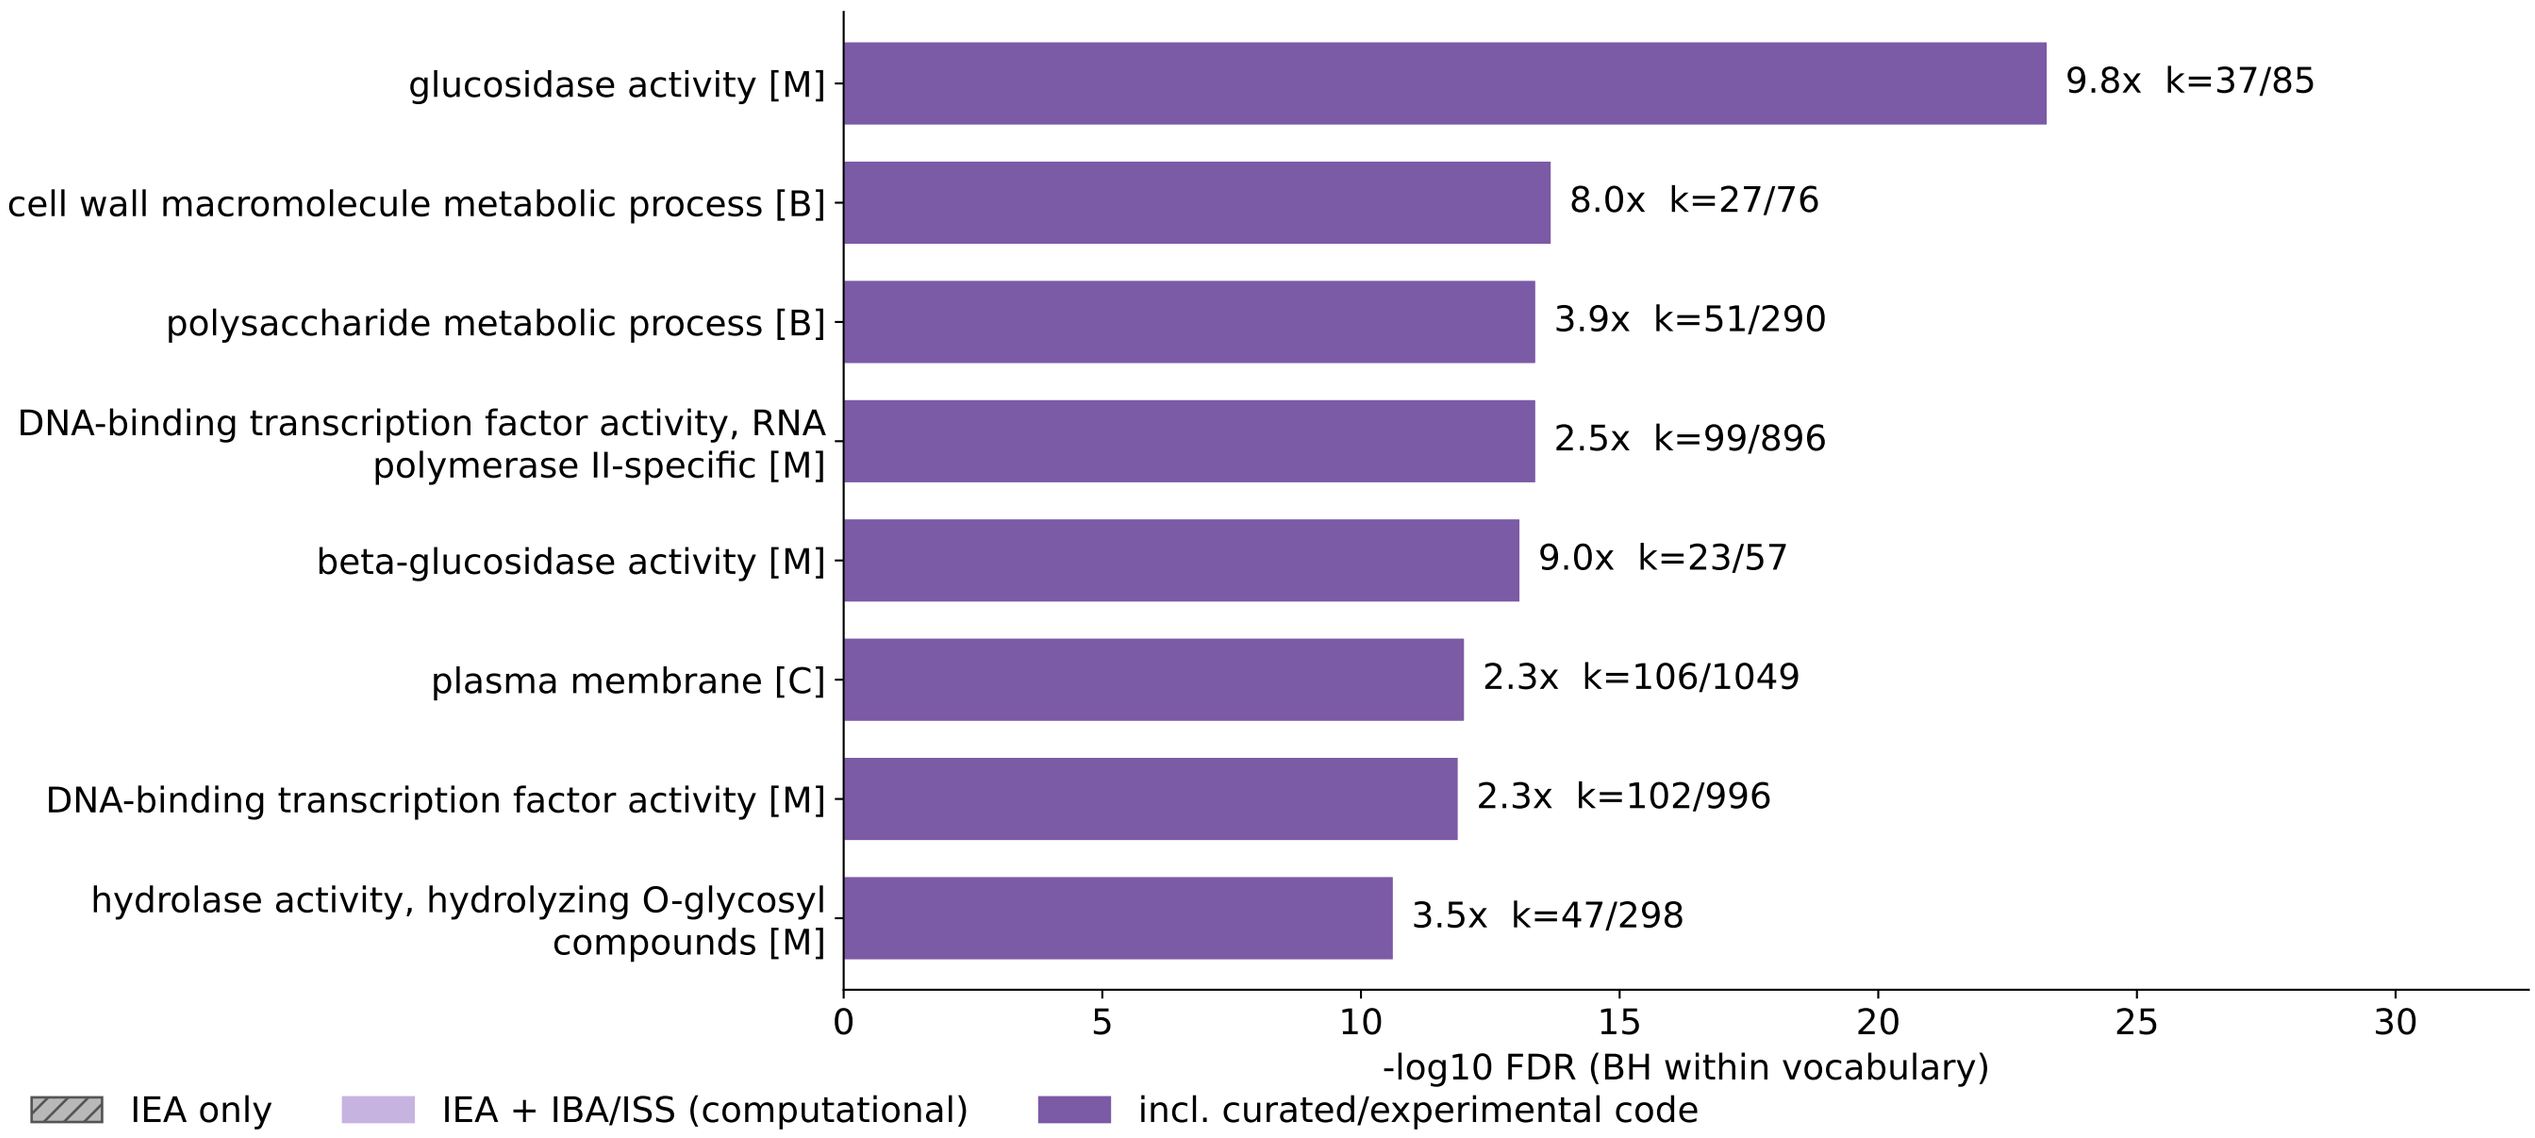
B Pfam families enriched in candidates (primary; family units on both sides)

1376 terms tested; 44 at FDR<0.05; annotated units: 788 cand. / 17943 all



C GO terms (secondary; UniProt computational evidence)

5216 terms tested; 195 at FDR<0.05; annotated units: 791 cand. / 17723 all



Annotation: UniProt reference proteomes (Pfam, InterPro, GO). Universe: all proteins of the 5 OUT proteomes. Family units: loss-candidate families from the pipeline (mmseqs on loss_candidates.fa); background clustered with mmseqs (0.3 id, 0.8 cov, cov-mode 0). One-sided hypergeometric; BH within each vocabulary. Bars: FDR<0.05 and k>=3 candidate units. Loss candidates: 1207; annotated fraction 0.9983.
