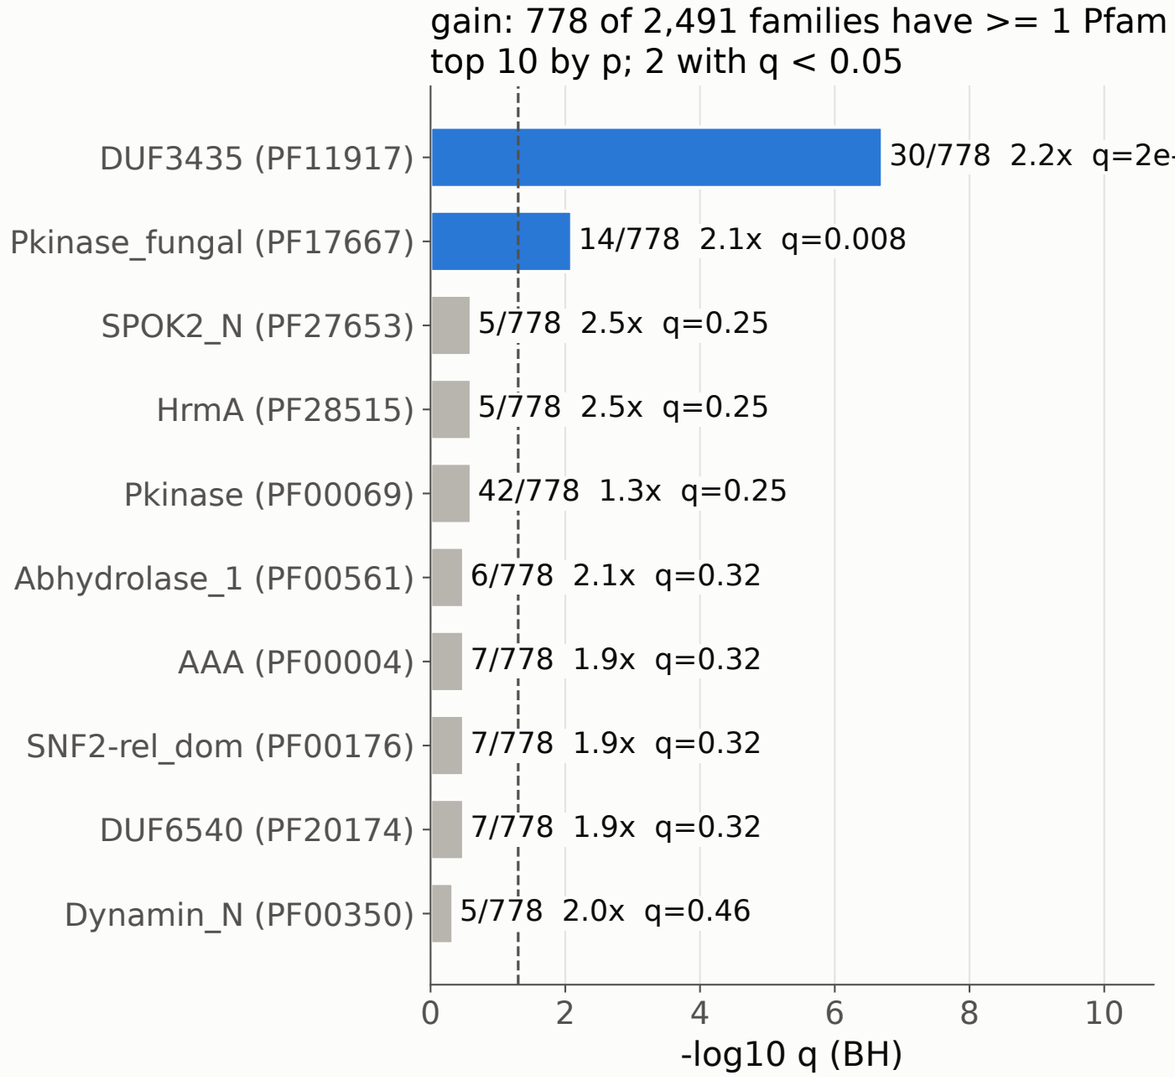
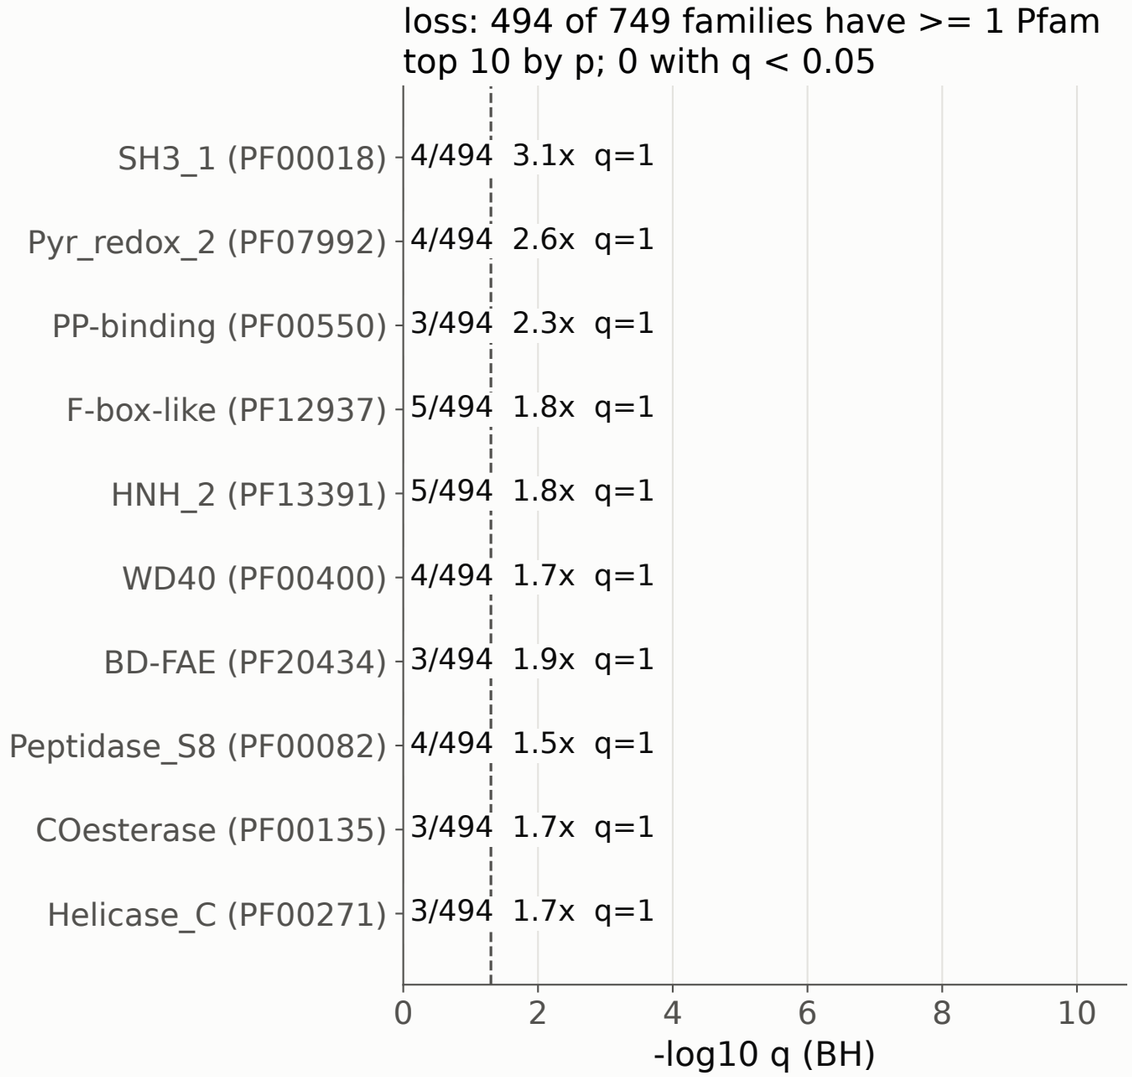
C. immitis (in) vs C. posadasii (out): 169 ingroup genomes (133 representatives), outgroup 360 genomes
Pfam enrichment of shell + soft-core families; gain = outgroup frequency <= 0.1, loss = >= 0.9
Run immitis_in_posadasii_out_v5; universe: shell + soft_core families with >= 1 Pfam (M = 1,907)





Bar label: k/N = test-set families with the domain / annotated test-set families; fold = k / expected.
Grey bar: q >= 0.05. Dashed line: q = 0.05. Annotation = family representative protein only (Pfam-A 38.2, hmmsearch --cut_ga).
