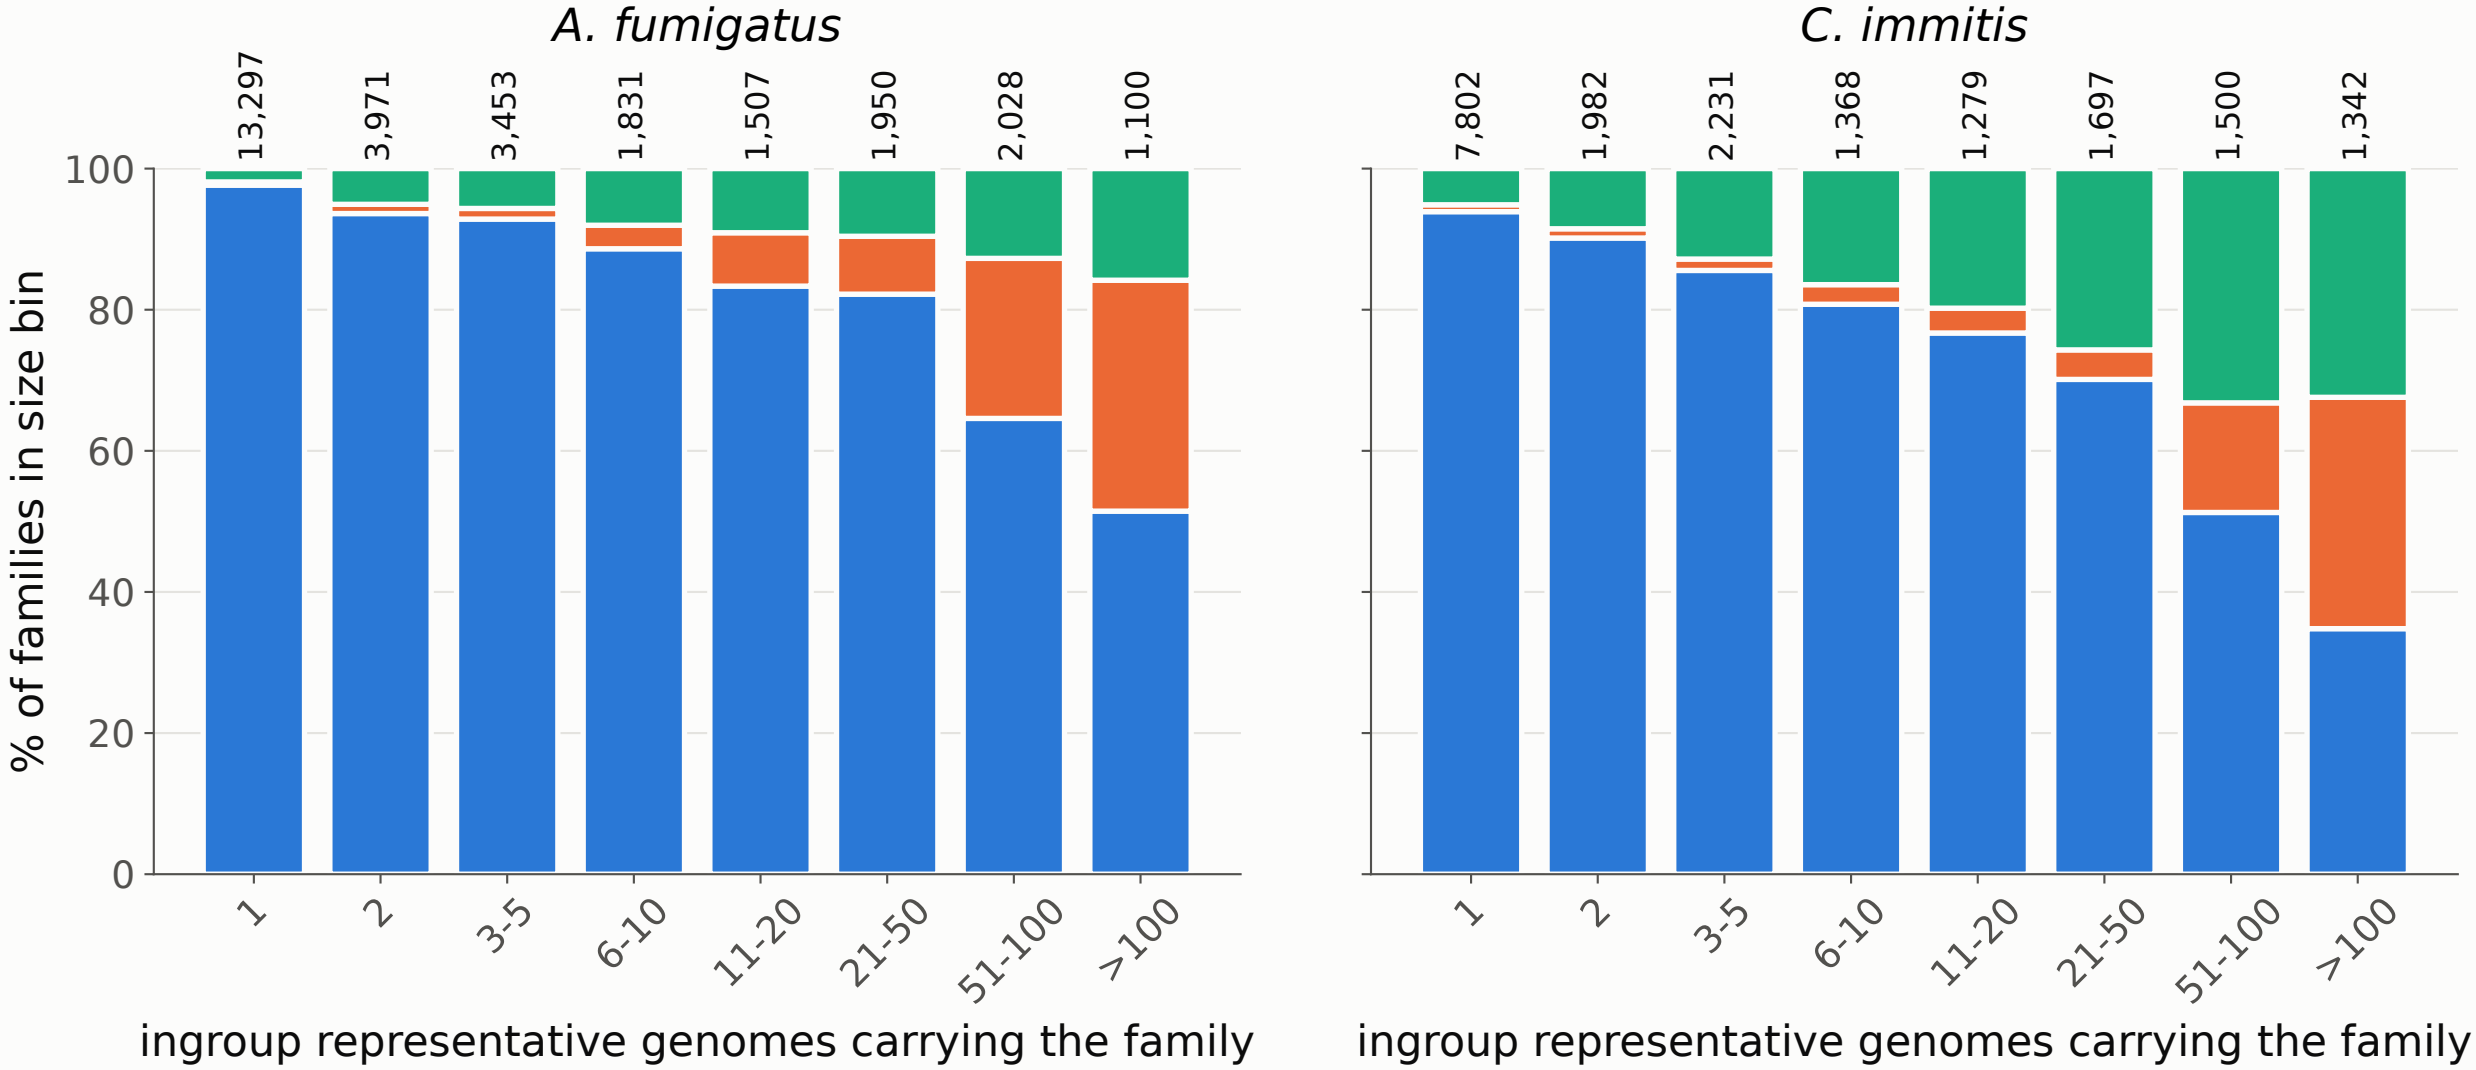
Gain / loss share by family size (soft_core+shell+cloud+singleton; numbers = families per bin)
outgroup-frequency rule: loss if >= 0.9 of outgroup genomes carry the family, gain if <= 0.1, else ambiguous



A. fumigatus: 293 ingroup genomes (121 representatives), outgroup 2 genomes
C. immitis: 169 ingroup genomes (133 representatives), outgroup 360 genomes

gain loss ambiguous
