early fungi (13 OUT) vs Neocallimastigomycota (6 IN): enrichment of loss-direction candidates
(present in >=0.75 of OUT, absent from all IN; diamond pairwise)

A 9,173 candidates in 13 OUT species

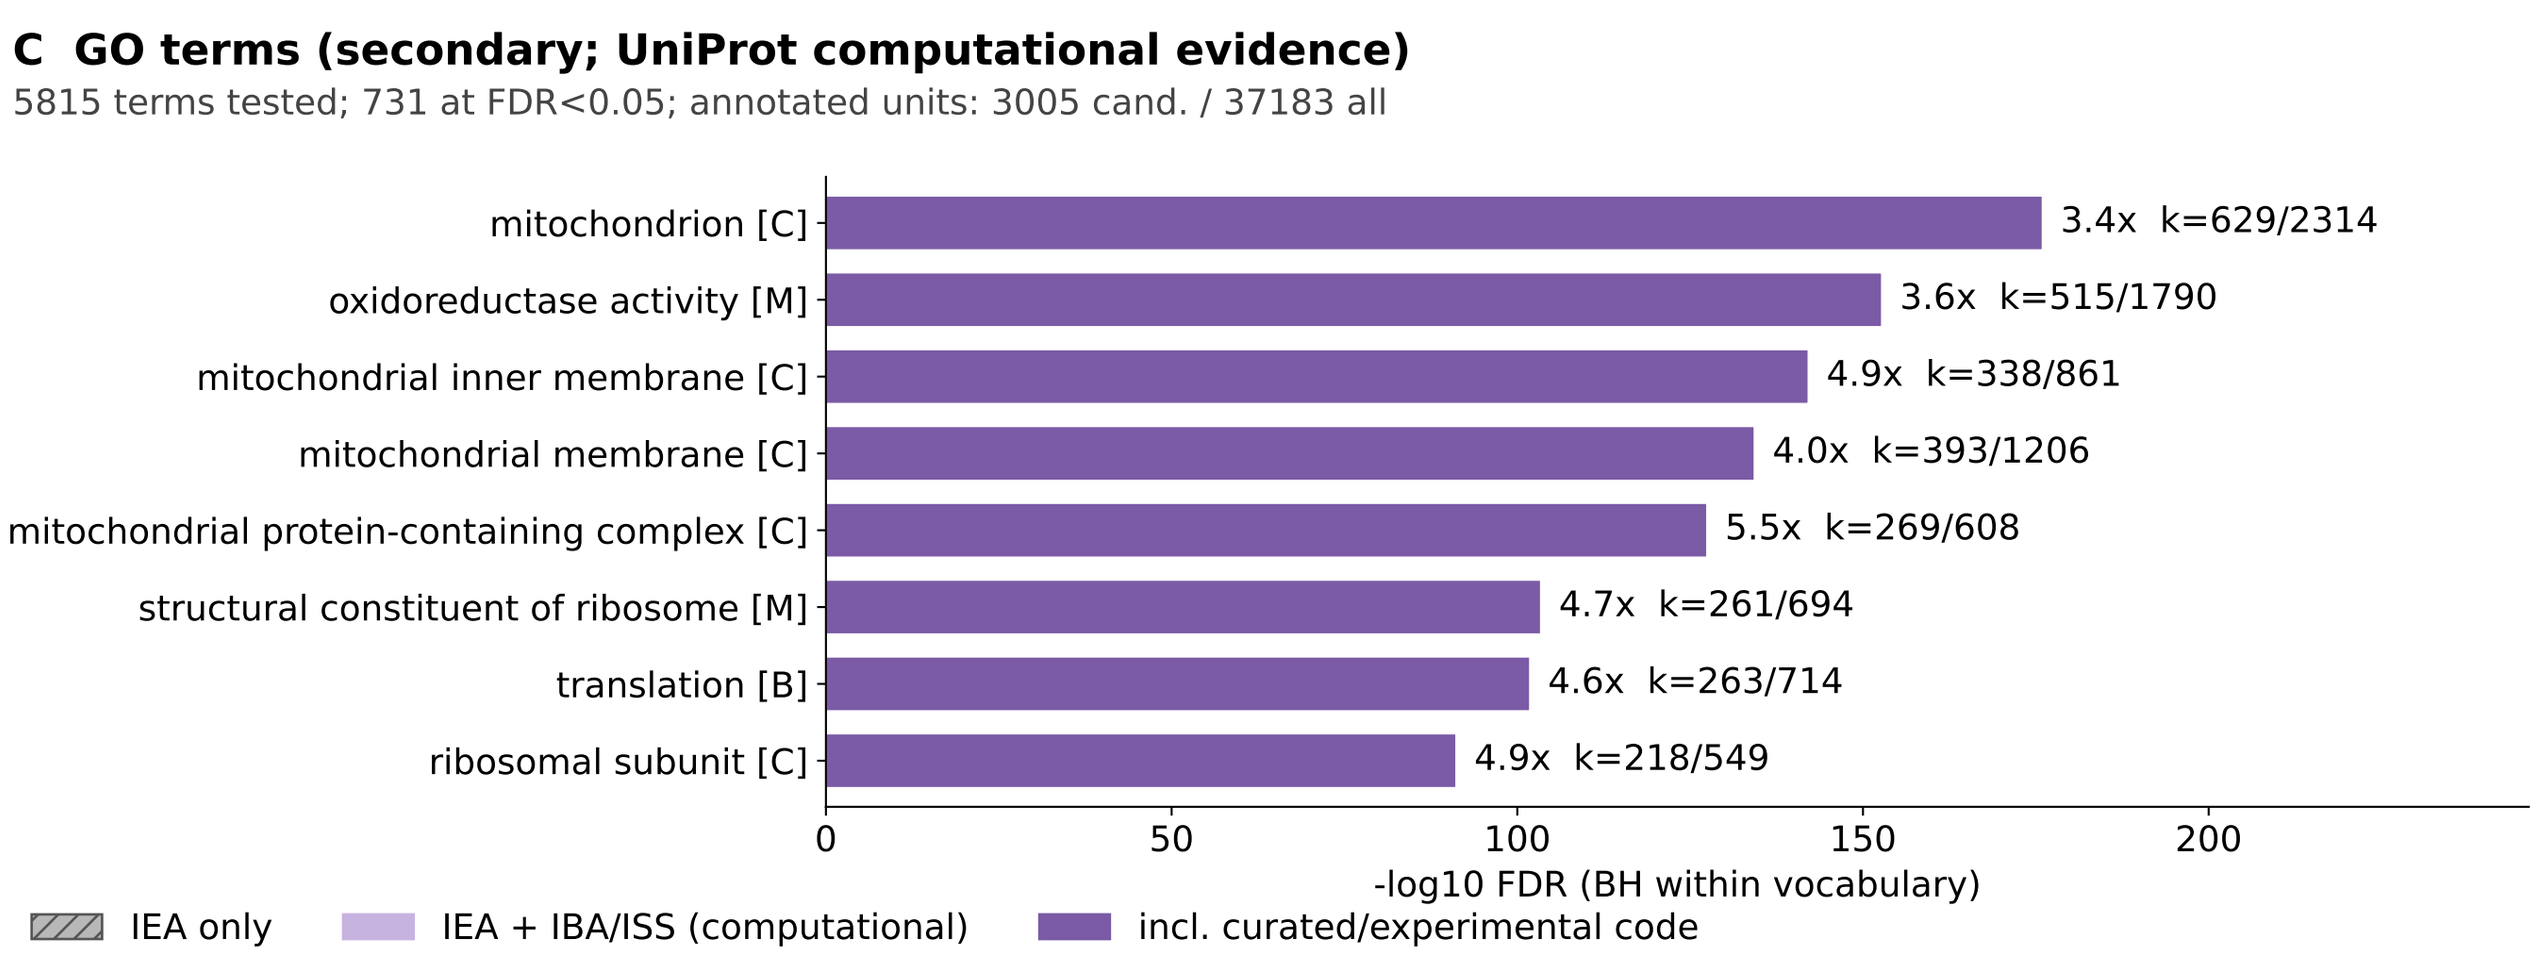

B Pfam families enriched in candidates (primary; family units on both sides)

3151 terms tested; 288 at FDR<0.05; annotated units: 3127 cand. / 41024 all

C GO terms (secondary; UniProt computational evidence)

5815 terms tested; 731 at FDR<0.05; annotated units: 3005 cand. / 37183 all

Annotation: UniProt reference proteomes (Pfam, InterPro, GO). Universe: all proteins of the 13 OUT proteomes. Family units: loss-candidate families from the pipeline (mmseqs on loss_candidates.fa); background clustered with mmseqs (0.3 id, 0.8 cov, cov-mode 0). One-sided hypergeometric; BH within each vocabulary. Bars: FDR<0.05 and k>=3 candidate units. Loss candidates: 9173; annotated fraction 0.9959.
