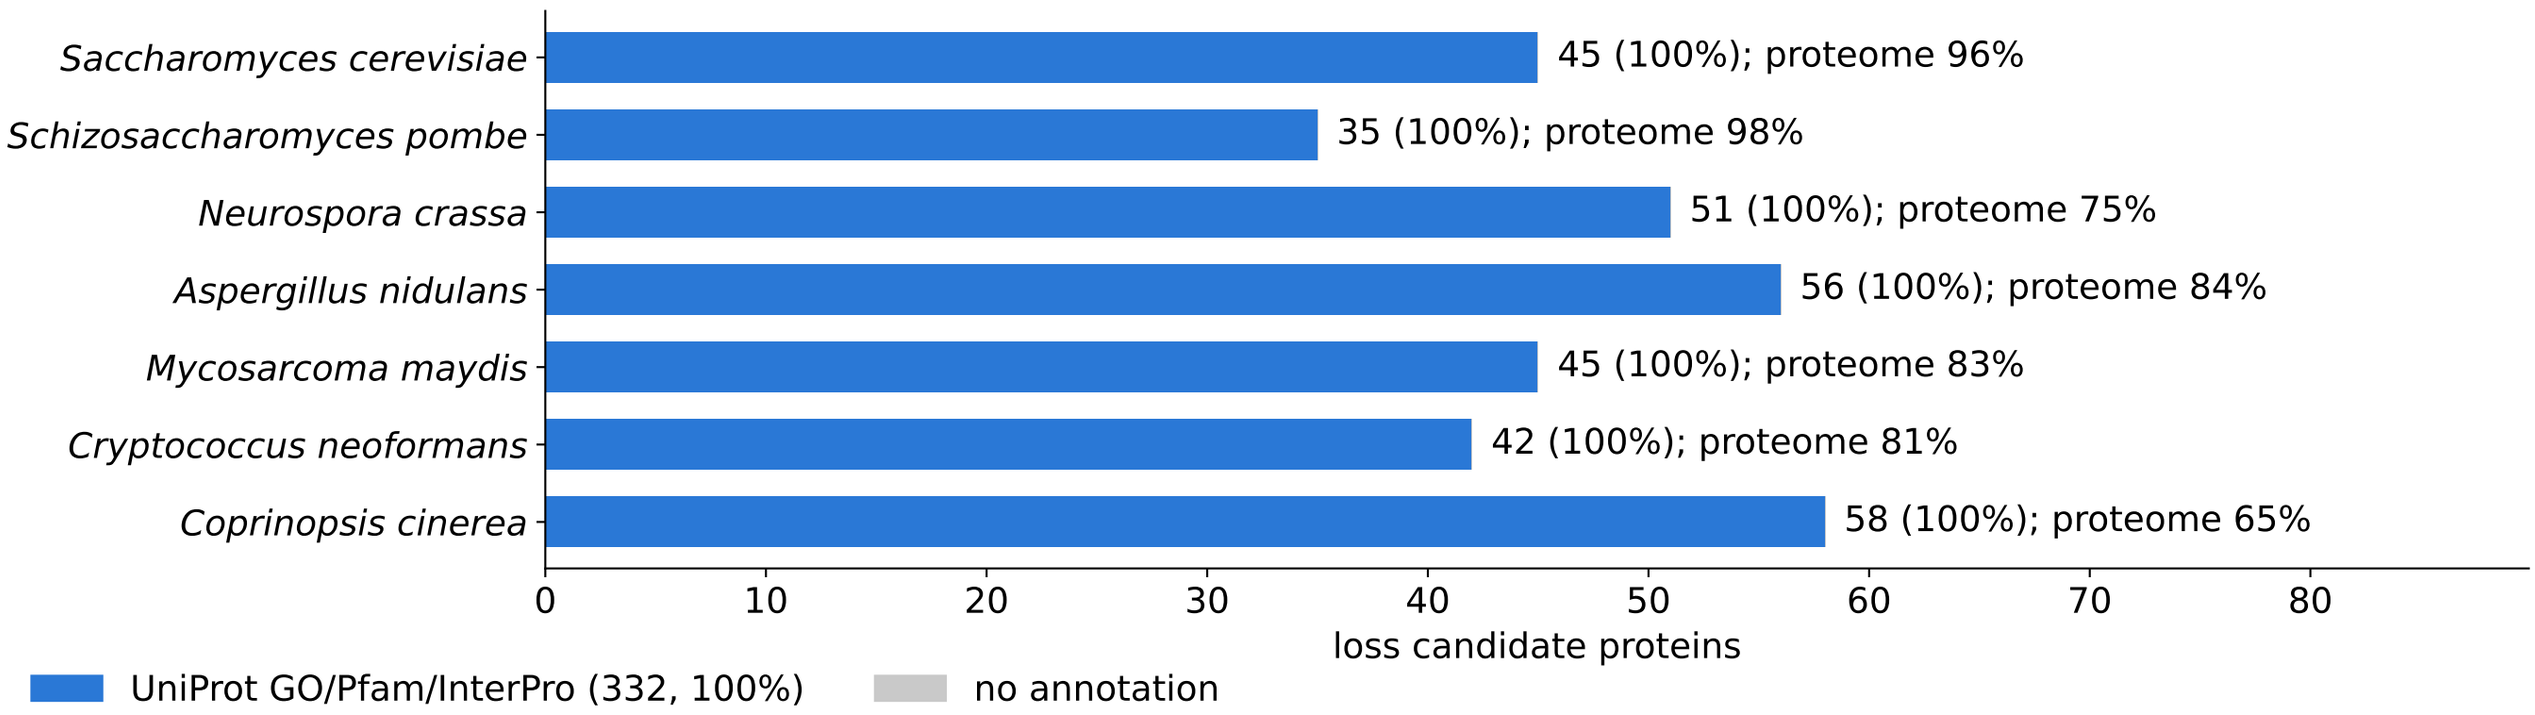
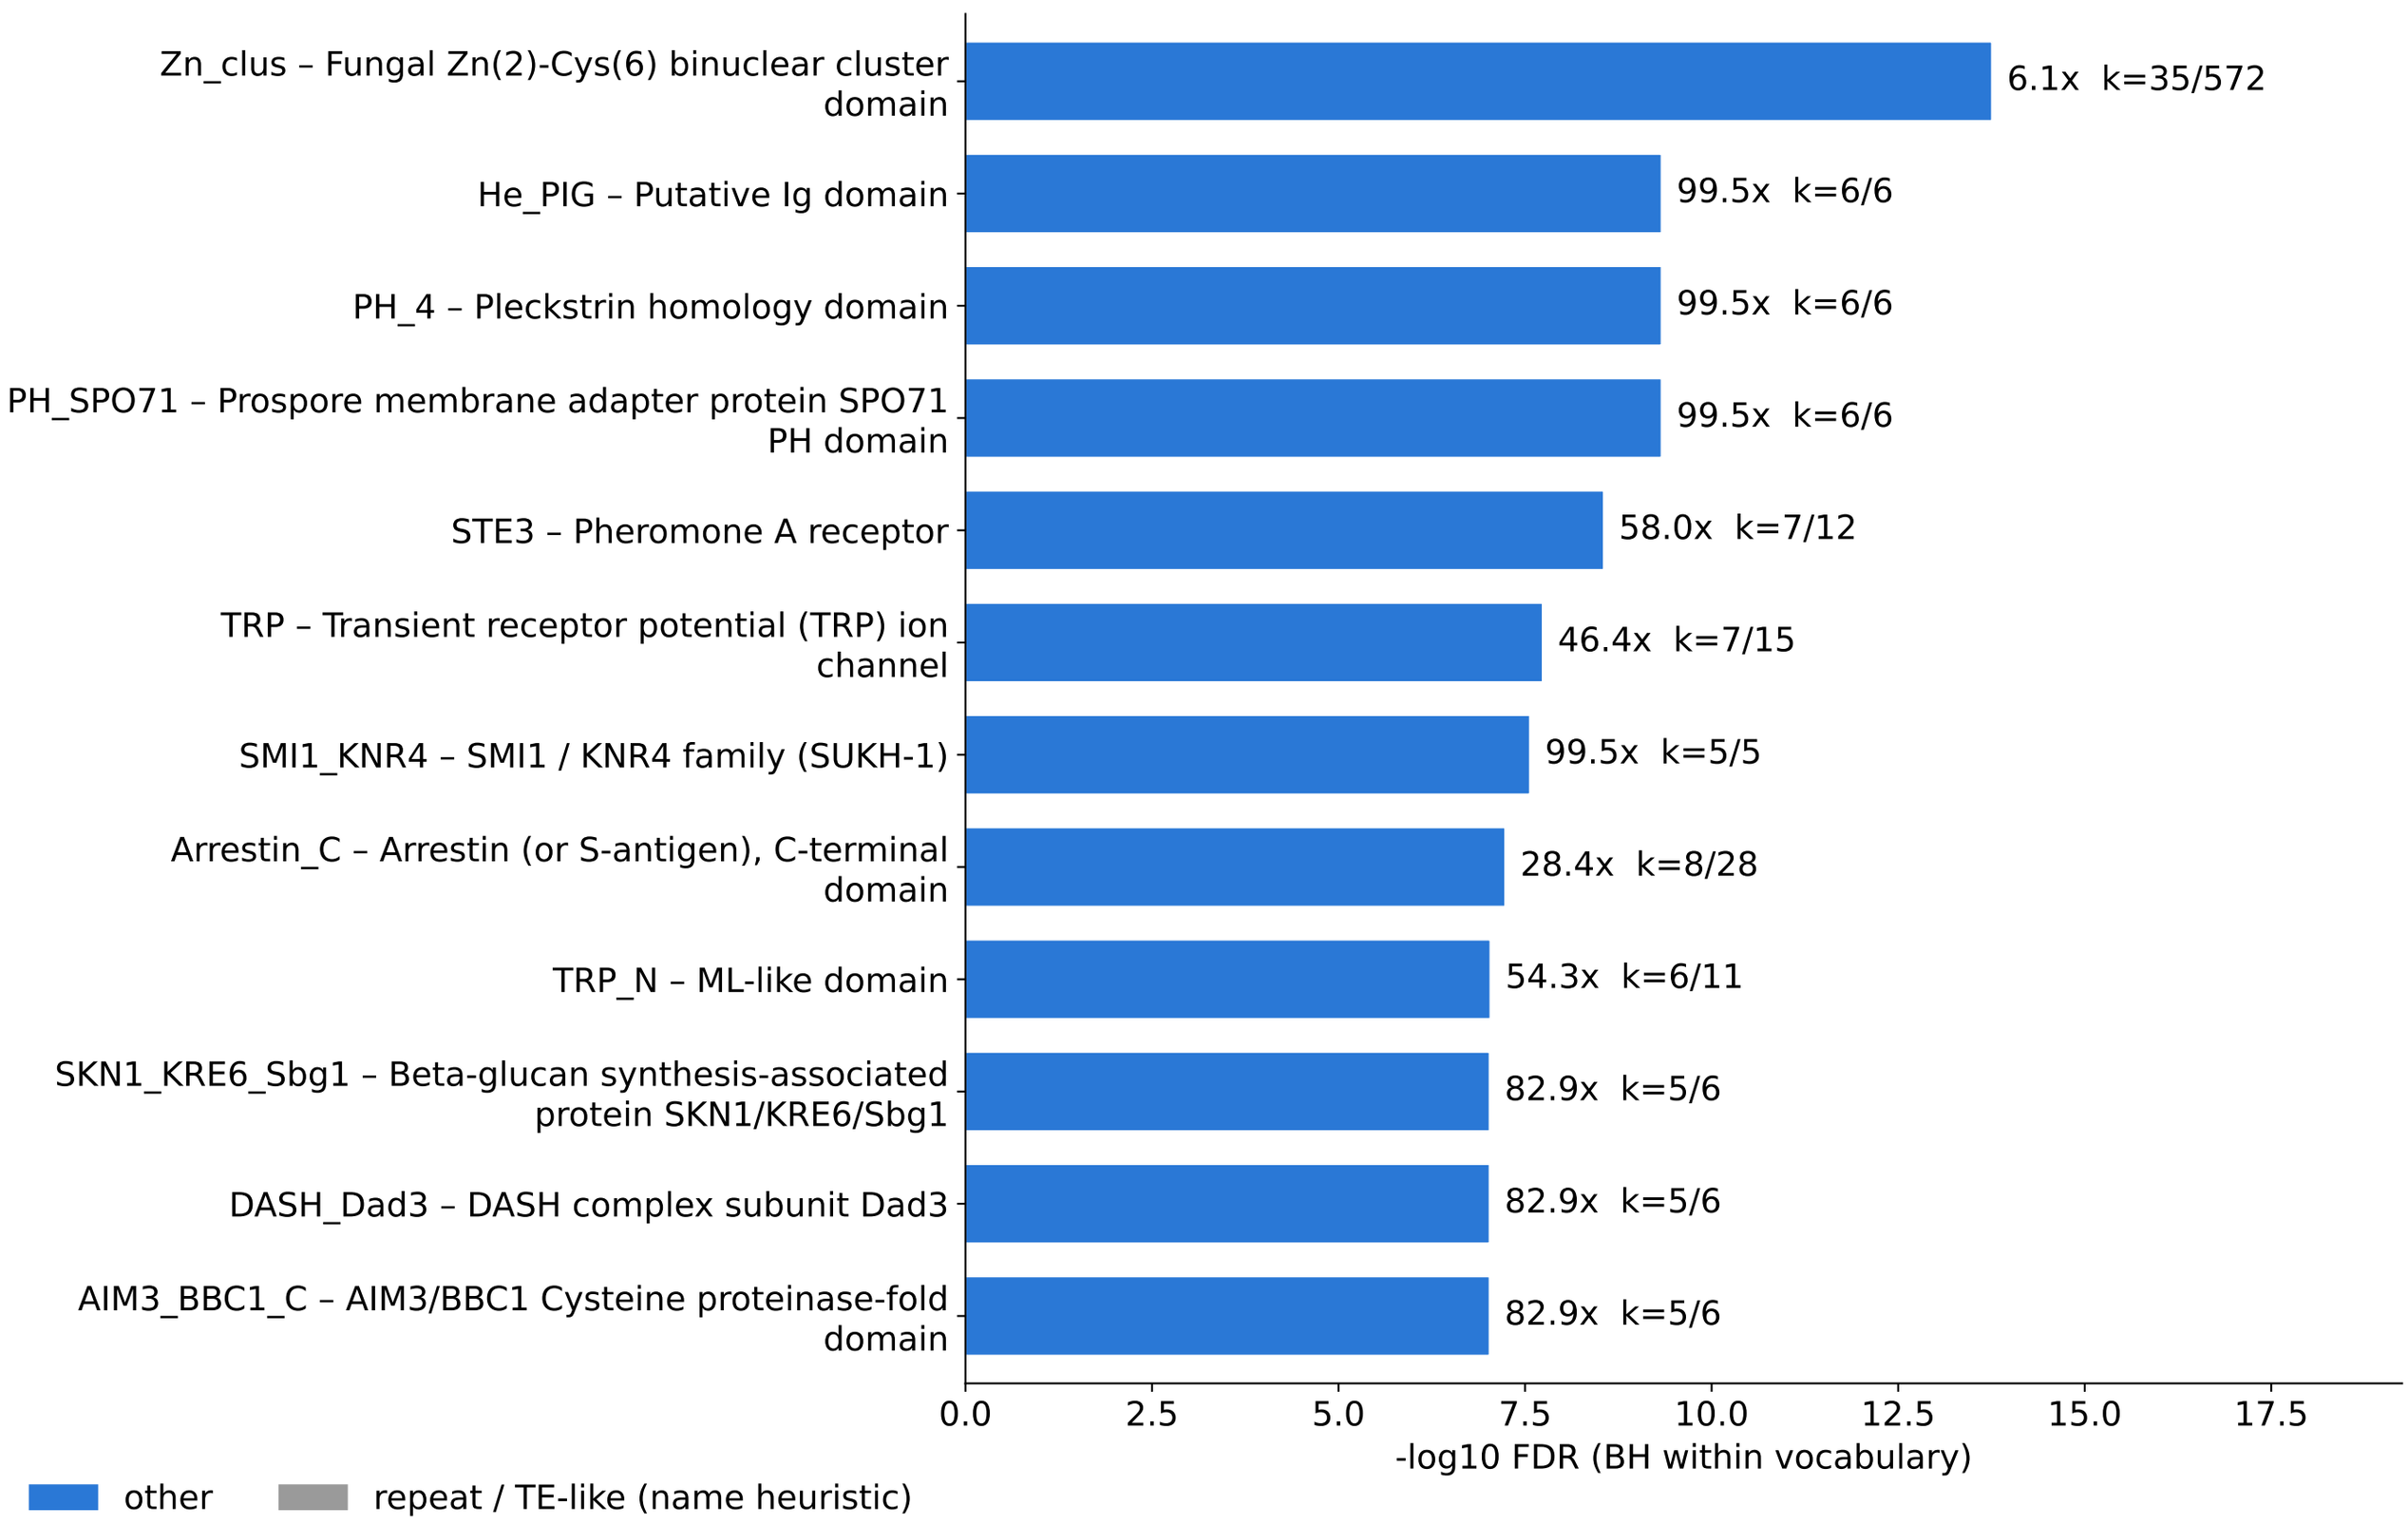
Dikarya (7 OUT) vs zoosporic fungi + Holozoa (25 IN): enrichment of loss-direction candidates (present in >=0.75 of Dikarya, absent from all IN)

A 332 candidates in 7 OUT species



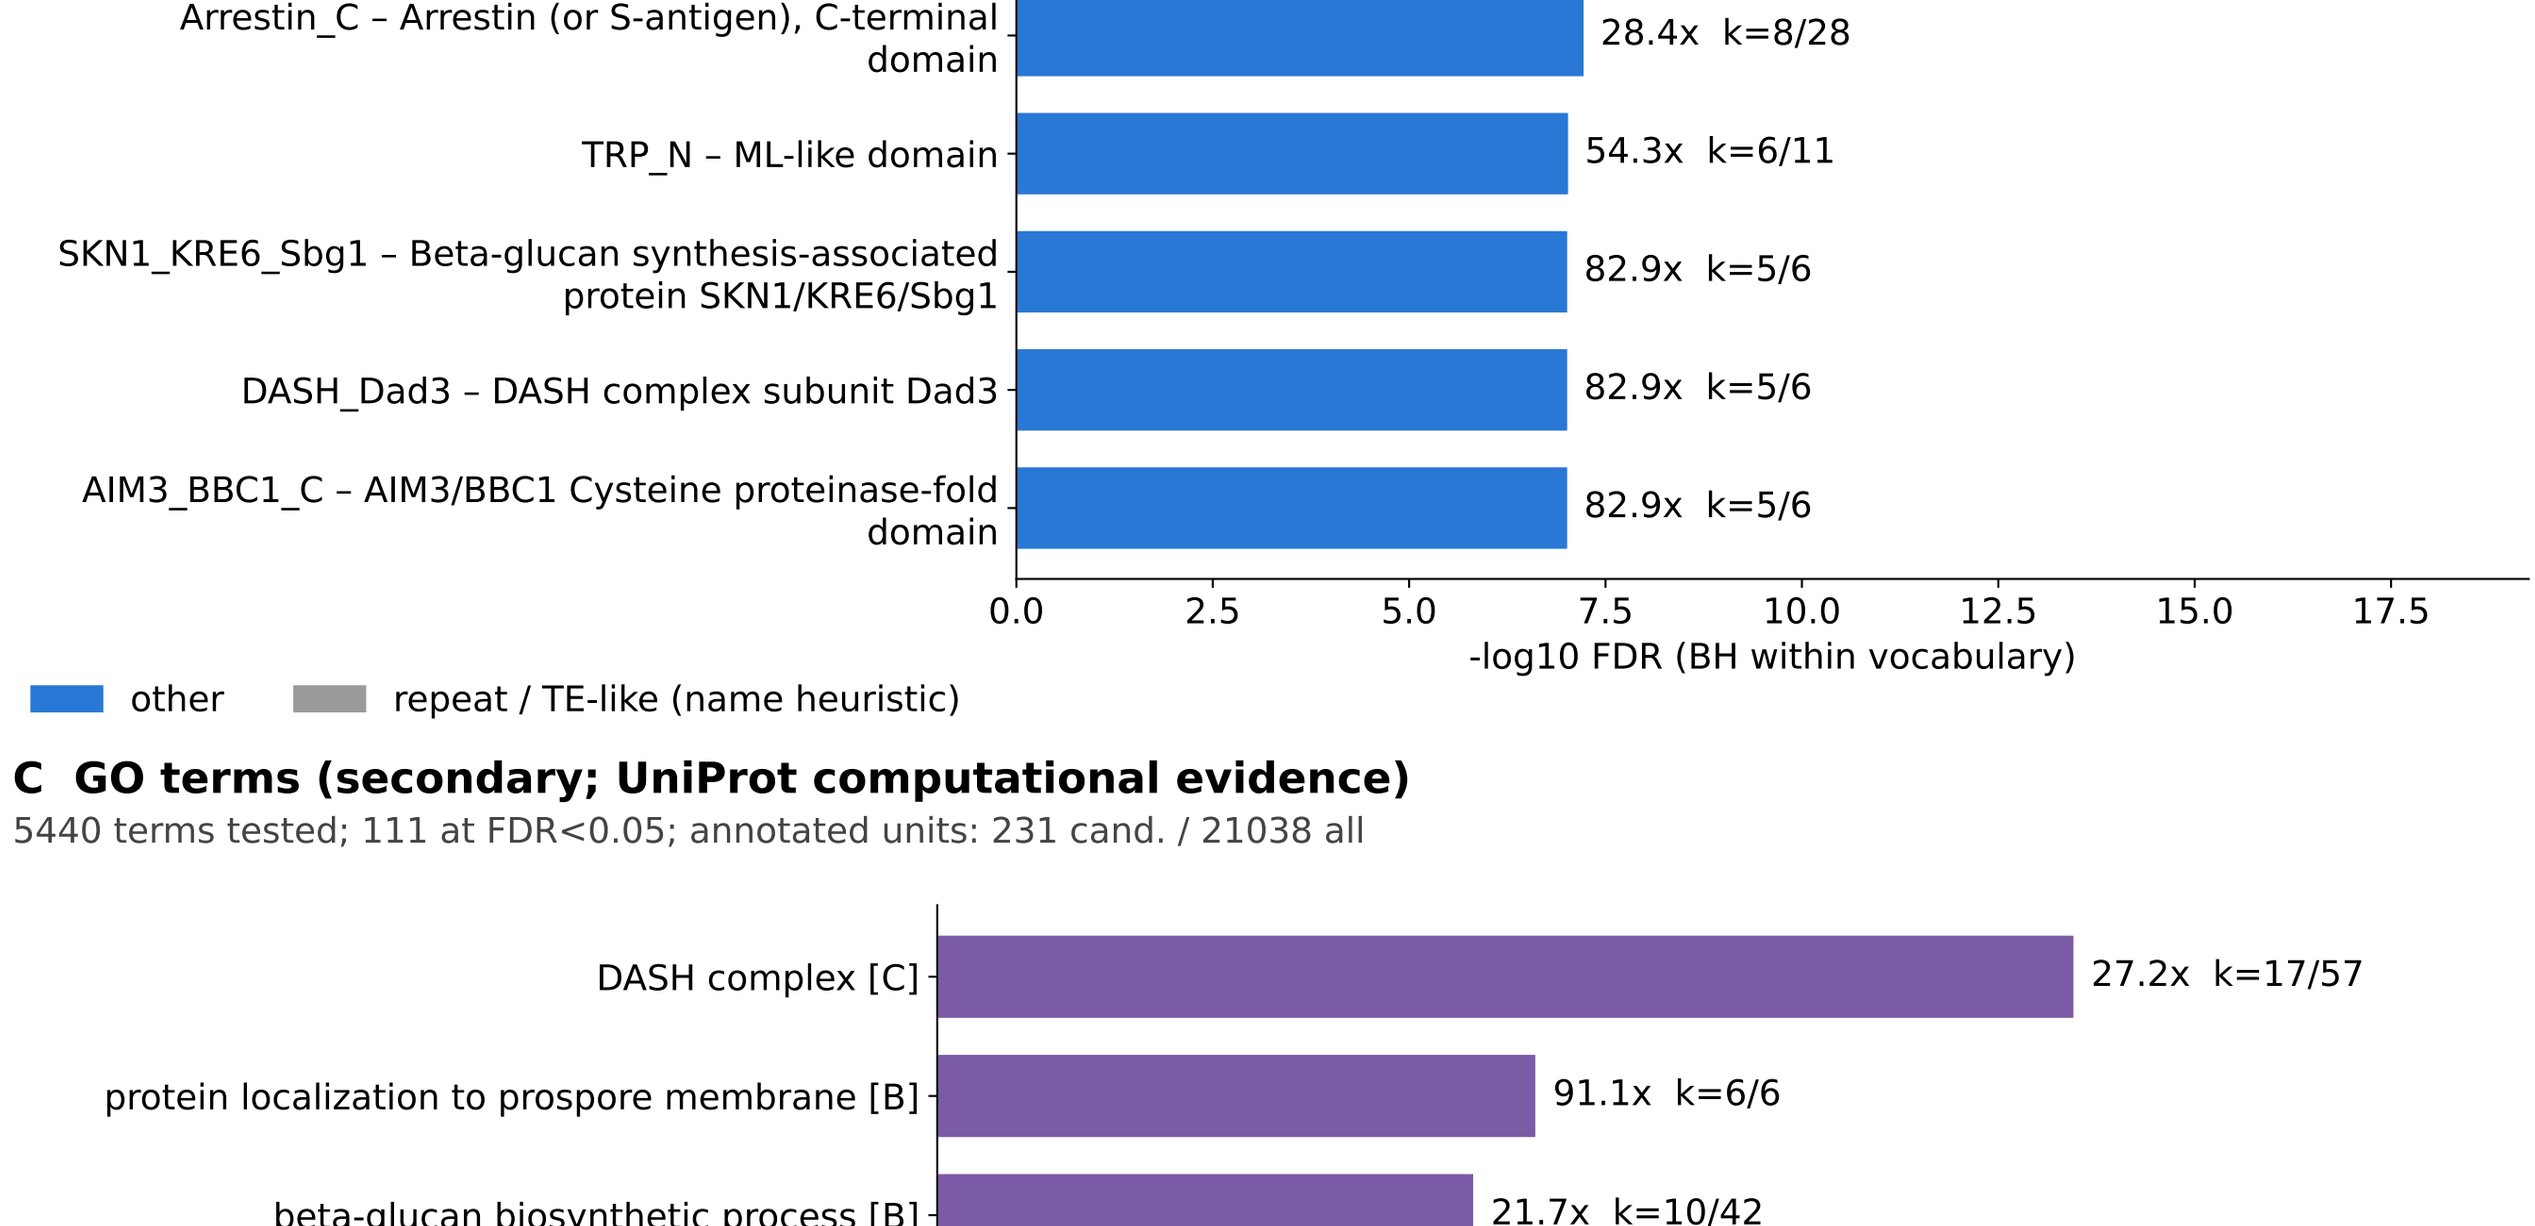
B Pfam families enriched in candidates (primary; family units on both sides)

1963 terms tested; 26 at FDR<0.05; annotated units: 225 cand. / 22388 all



C GO terms (secondary; UniProt computational evidence)

5440 terms tested; 111 at FDR<0.05; annotated units: 231 cand. / 21038 all



Annotation: UniProt reference proteomes (Pfam, InterPro, GO). Universe: all proteins of the 7 Dikarya proteomes. Family units: loss-candidate families from the pipeline (mmseqs on loss_candidates.fa); background clustered with mmseqs (0.3 id, 0.8 cov, cov-mode 0). One-sided hypergeometric; BH within each vocabulary. Bars: FDR<0.05 and k>=3 candidate units. Small candidate set (332): low power.
