other Saccharomycotina (13 OUT) vs Metschnikowiaceae incl. C. auris (9 IN): enrichment of loss-direction candidates (present in >=0.75 of OUT, absent from all IN; diamond pairwise, nf_NovInvenio run 2026-10-11)

A 182 candidates in 13 OUT species

B Pfam families enriched in candidates (primary; family units on both sides)

1160 terms tested; 6 at FDR<0.05; annotated units: 73 cand. / 13892 all

C GO terms (secondary; UniProt computational evidence)

4097 terms tested; 2 at FDR<0.05; annotated units: 42 cand. / 12533 all

Annotation: UniProt reference proteomes (Pfam, InterPro, GO). Universe: all proteins of the 13 OUT proteomes. Family units: loss-candidate families from the pipeline (mmseqs on loss_candidates.fa); background clustered with mmseqs (0.3 id, 0.8 cov, cov-mode 0). One-sided hypergeometric; BH within each vocabulary. Bars: FDR<0.05 and k>=3 candidate units. Loss candidates: 182; annotated fraction 0.7527.
