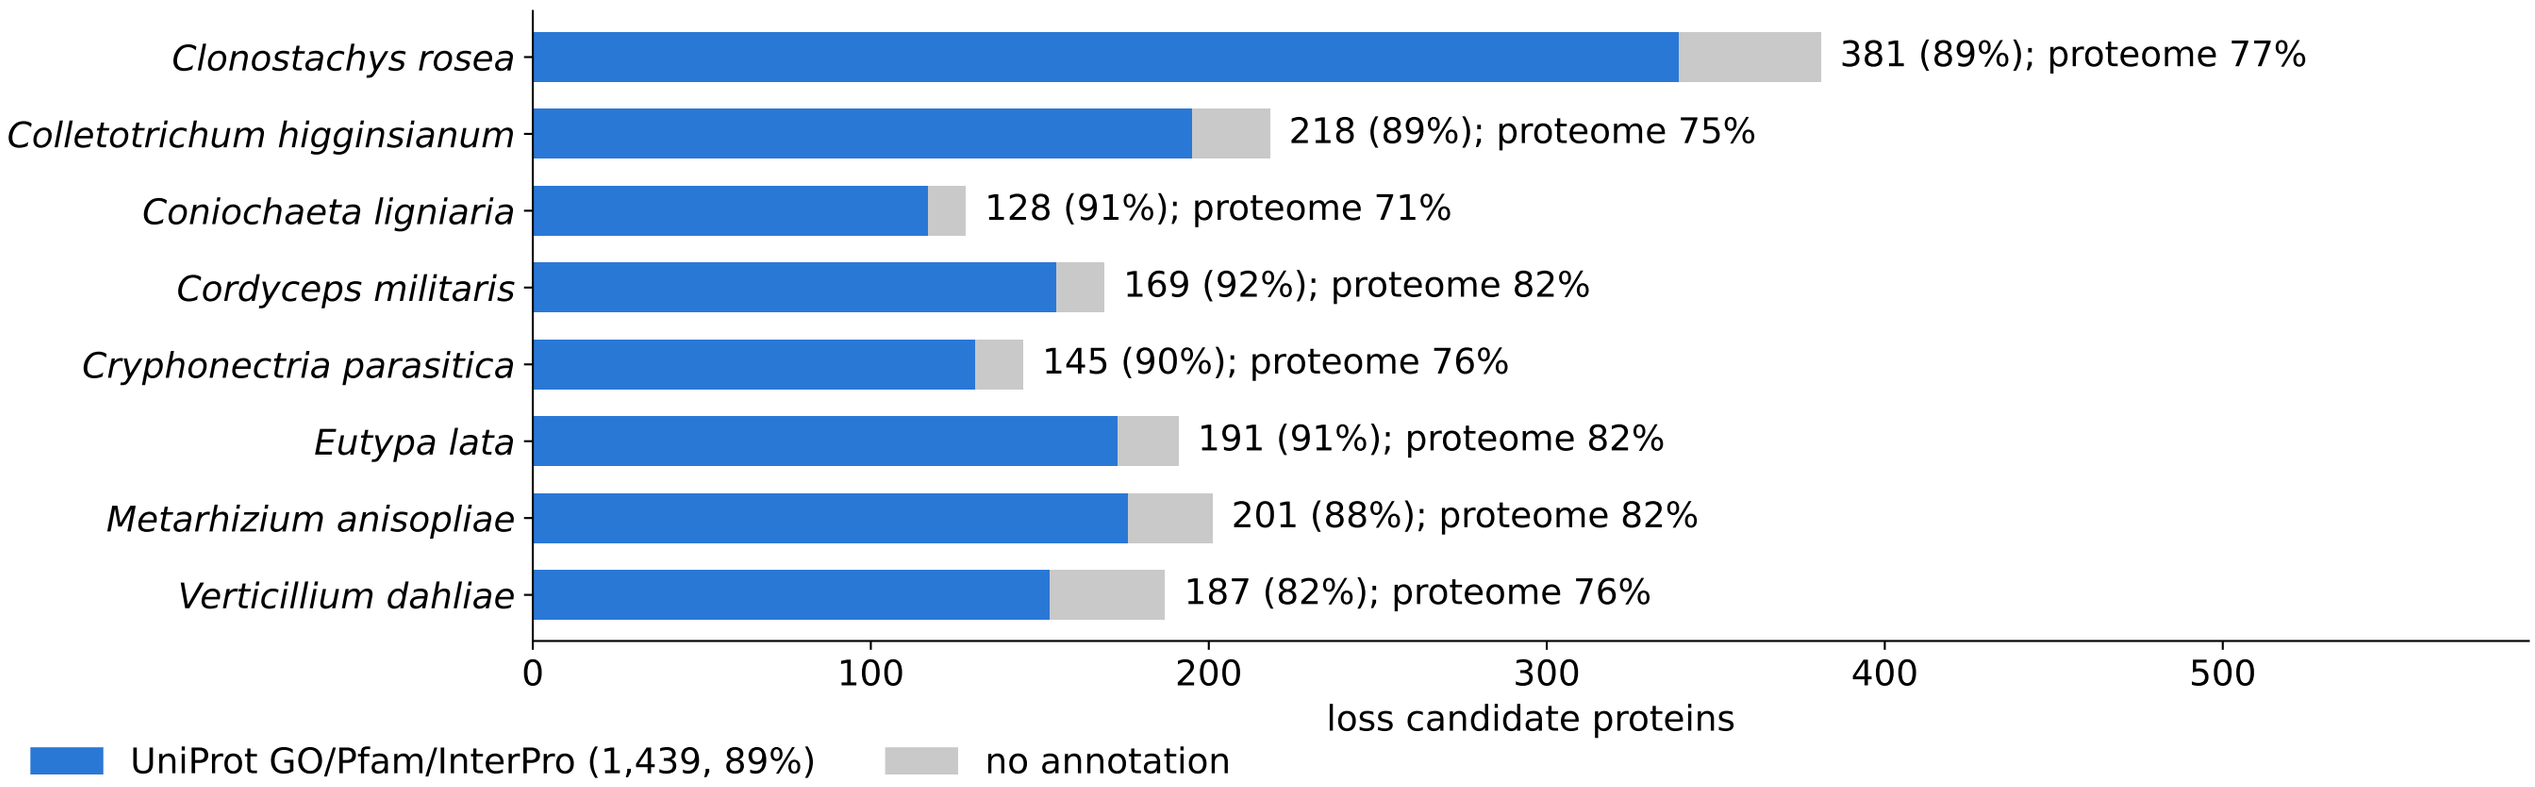
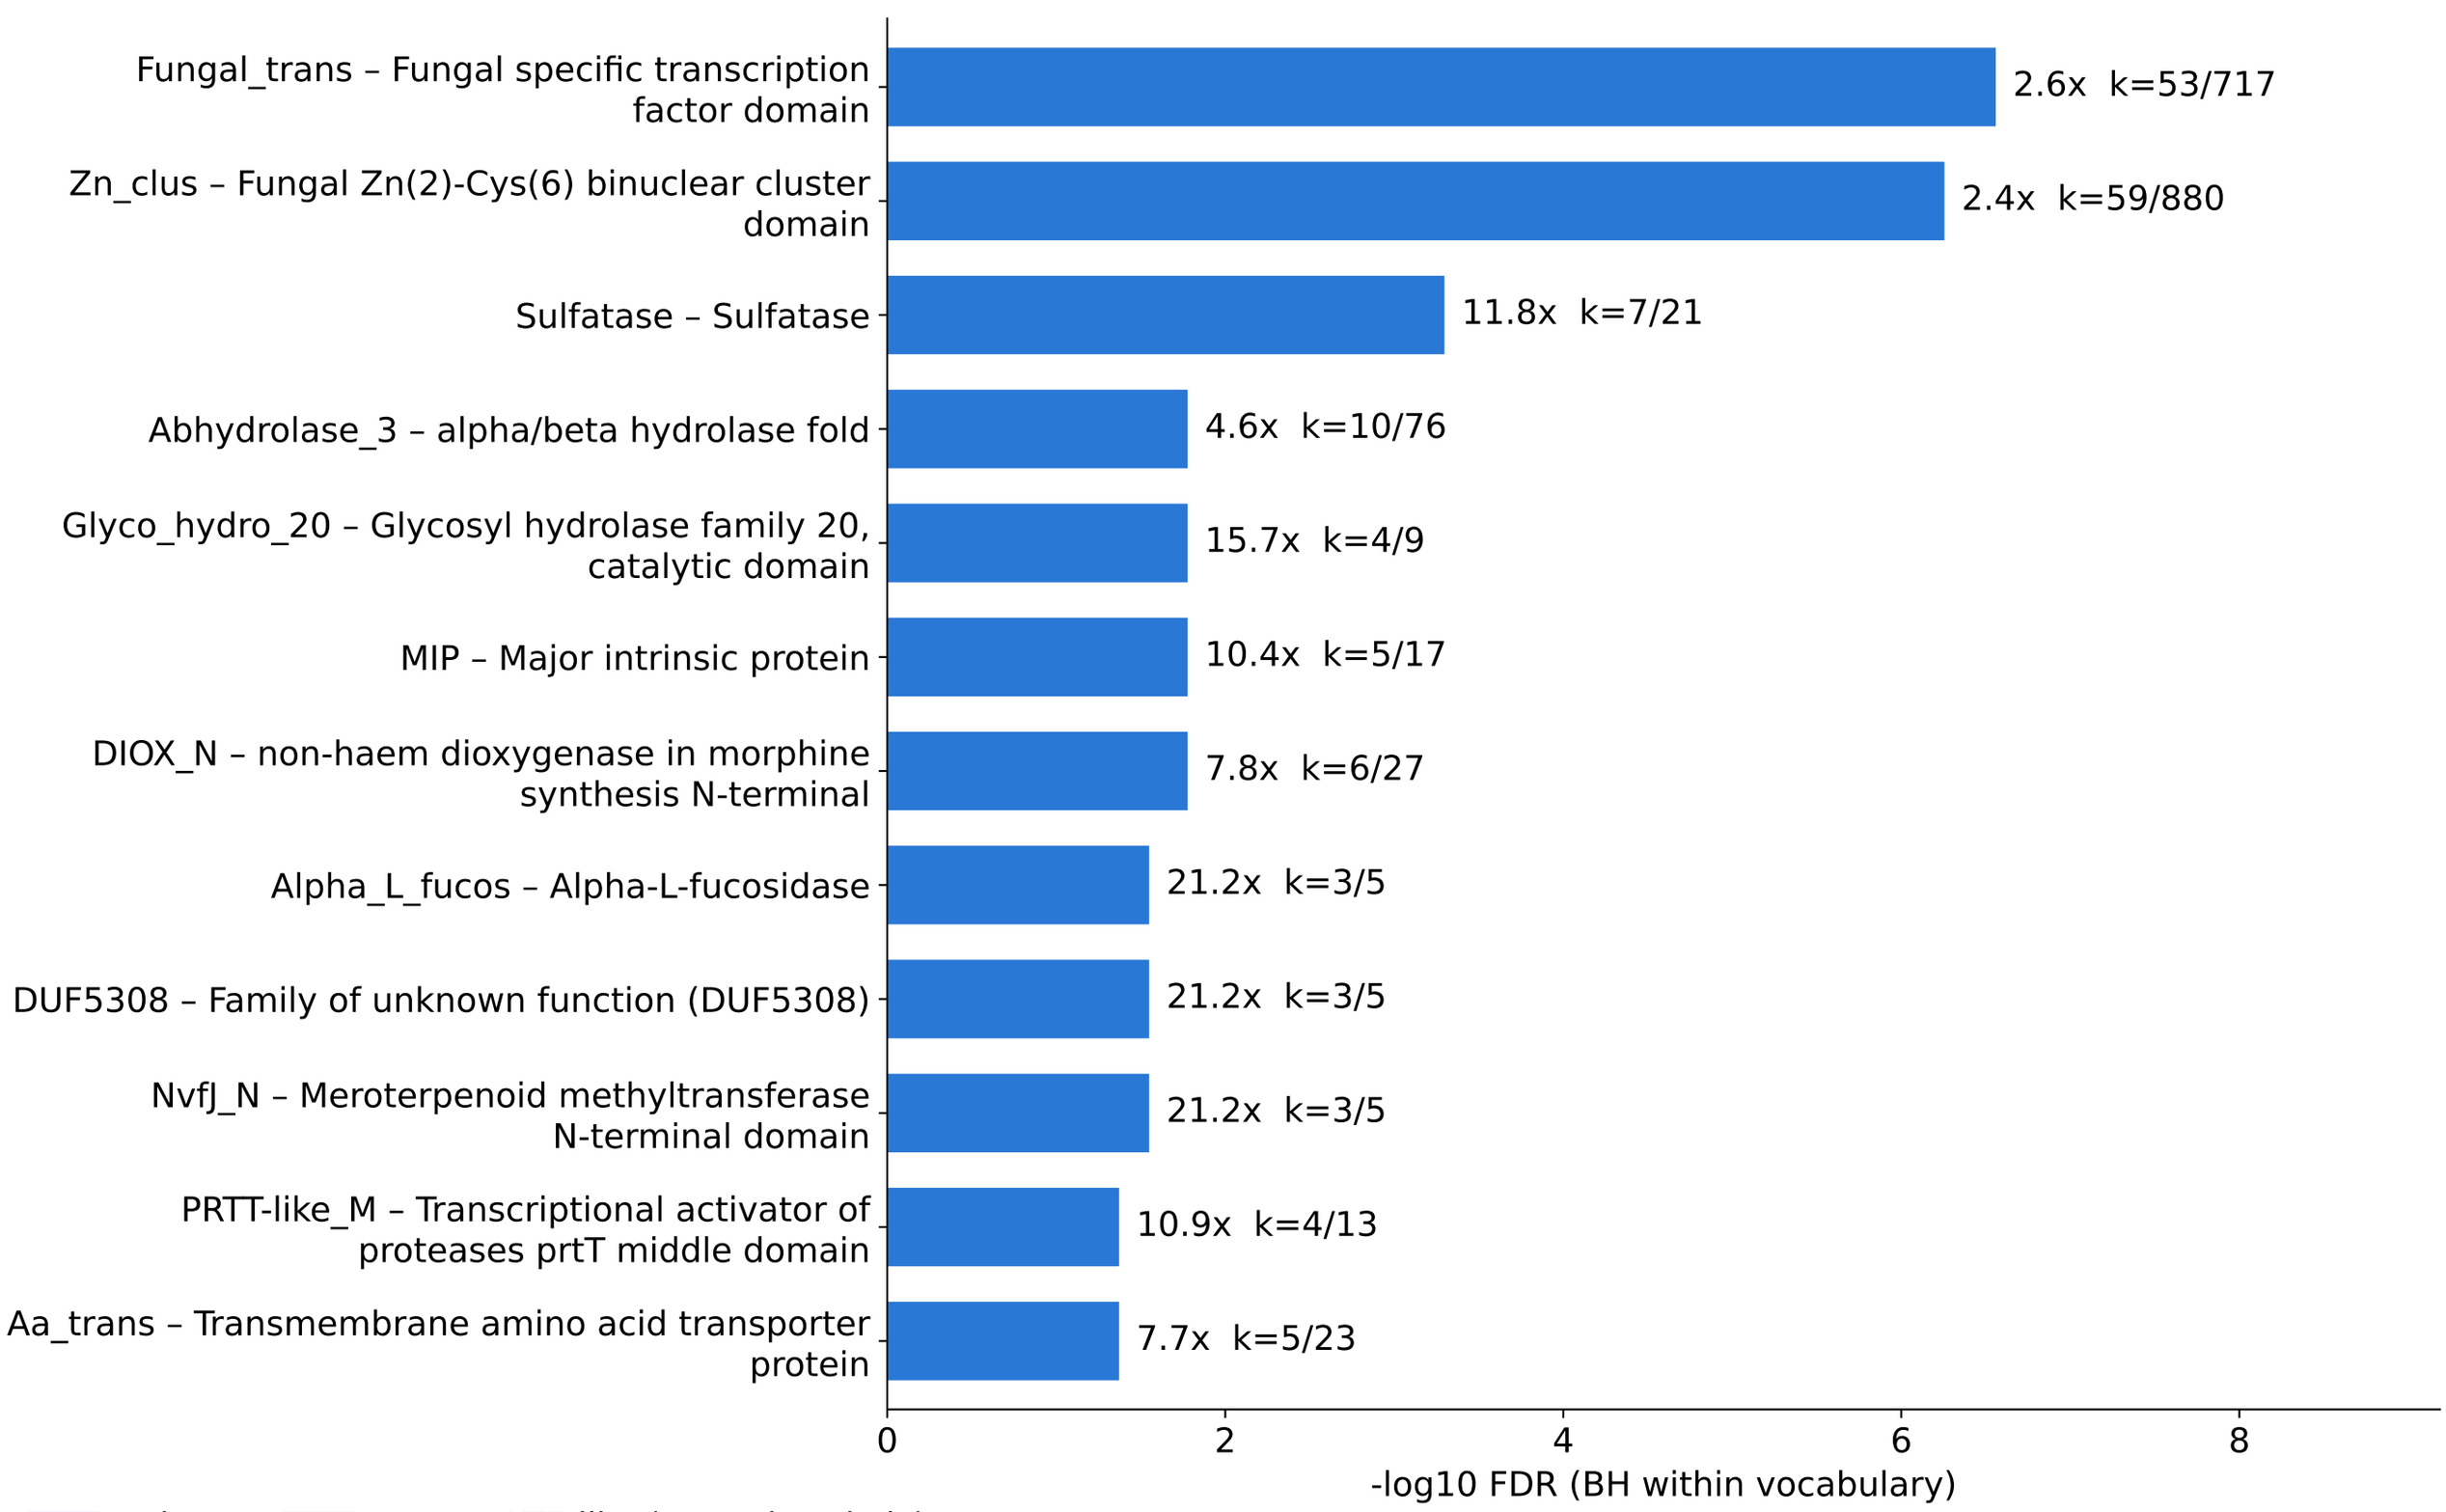
OUT (8 OUT) vs Sordariales shallow (4 IN): enrichment of loss-direction candidates (present in >=0.75 of OUT, absent from all IN; diamond pairwise)

A 1,620 candidates in 8 OUT species



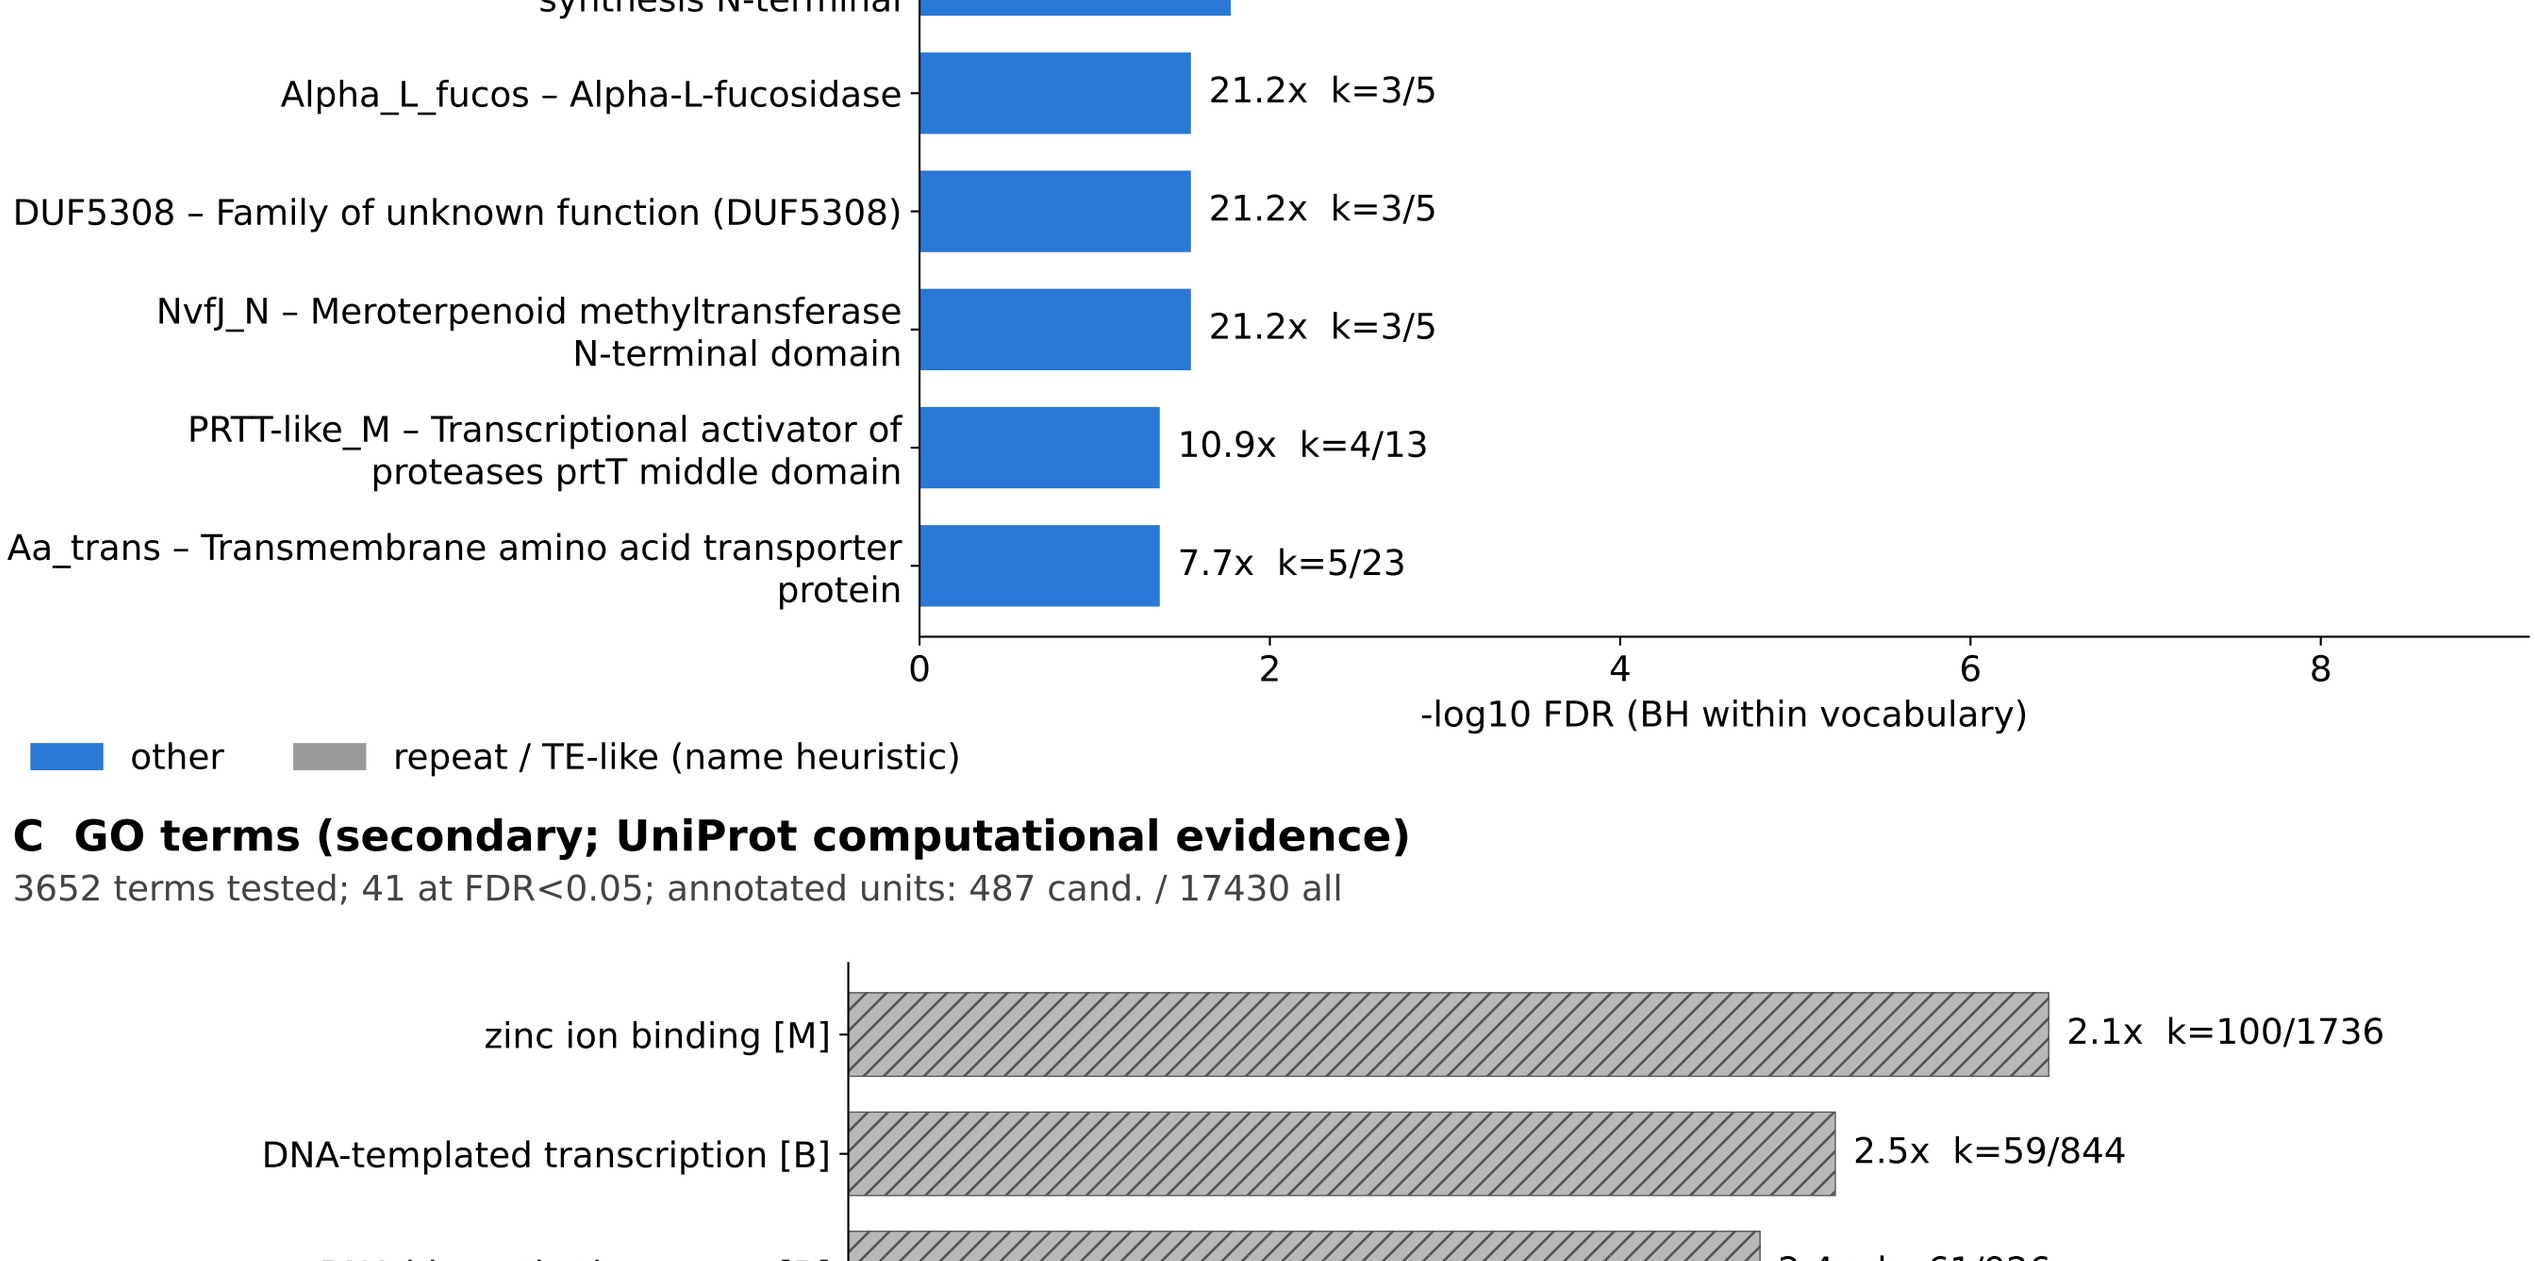
B Pfam families enriched in candidates (primary; family units on both sides)

1292 terms tested; 13 at FDR<0.05; annotated units: 625 cand. / 22069 all



C GO terms (secondary; UniProt computational evidence)

3652 terms tested; 41 at FDR<0.05; annotated units: 487 cand. / 17430 all



Annotation: UniProt reference proteomes (Pfam, InterPro, GO). Universe: all proteins of the 8 OUT proteomes. Family units: loss-candidate families from the pipeline (mmseqs on loss_candidates.fa); background clustered with mmseqs (0.3 id, 0.8 cov, cov-mode 0). One-sided hypergeometric; BH within each vocabulary. Bars: FDR<0.05 and k>=3 candidate units. Loss candidates: 1620; annotated fraction 0.8883.
