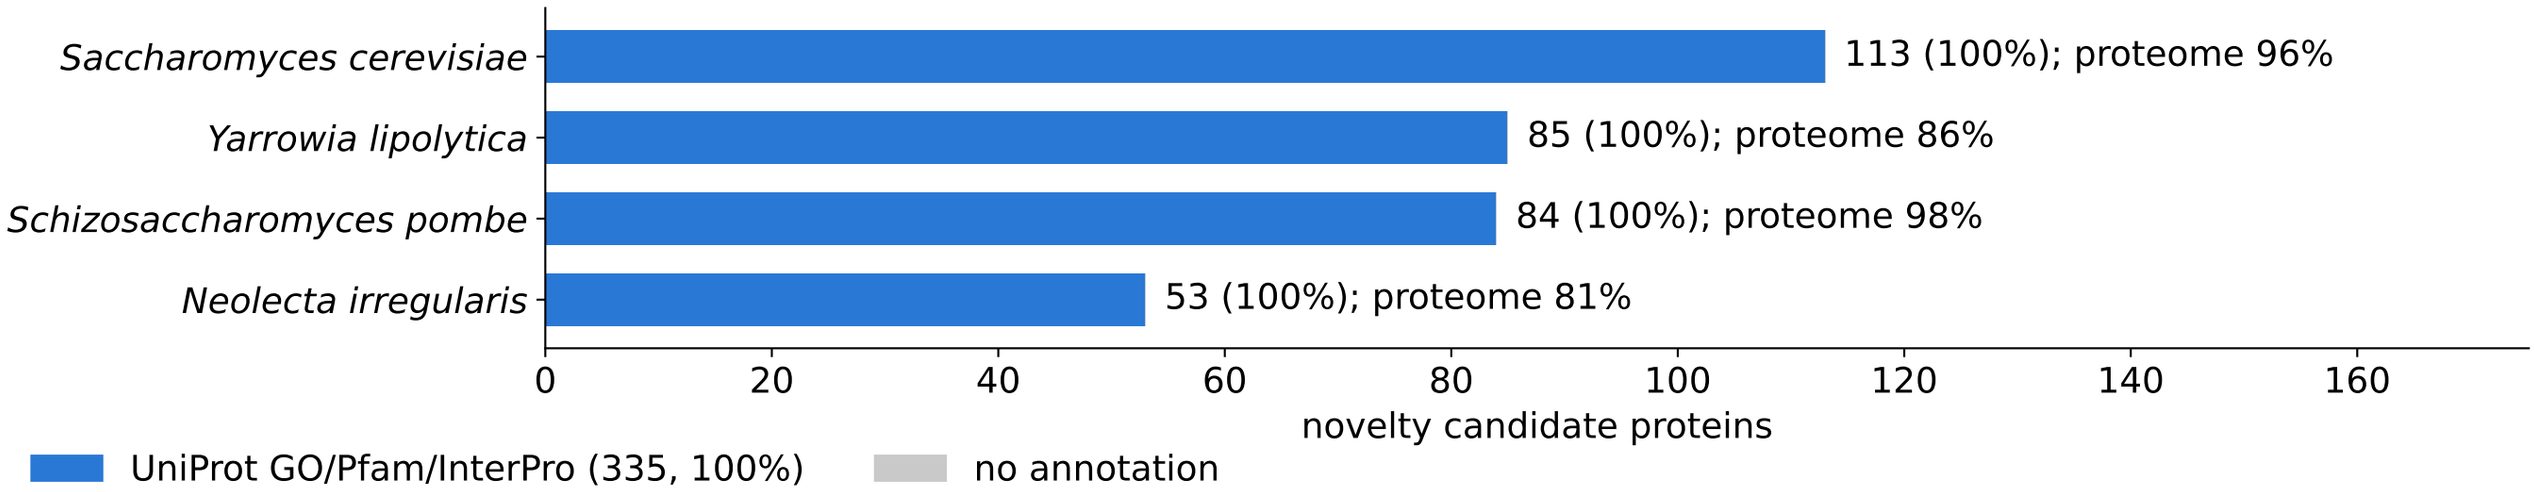
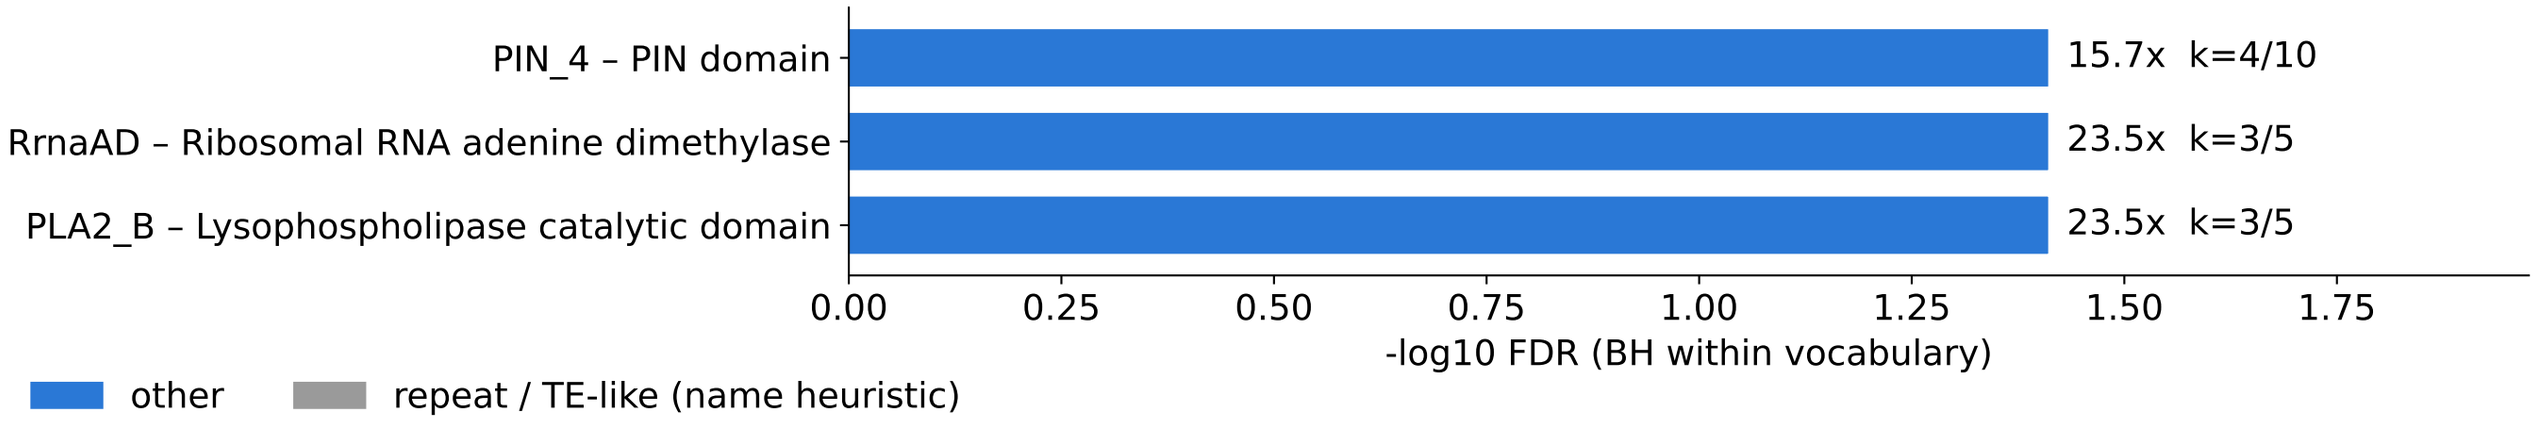
Yeasts (4 IN) vs filamentous Ascomycota (4 OUT): enrichment of novelty candidates (diamond pairwise, nf_NovInvenio run 2026-09-10)

A 335 candidates in 4 IN species



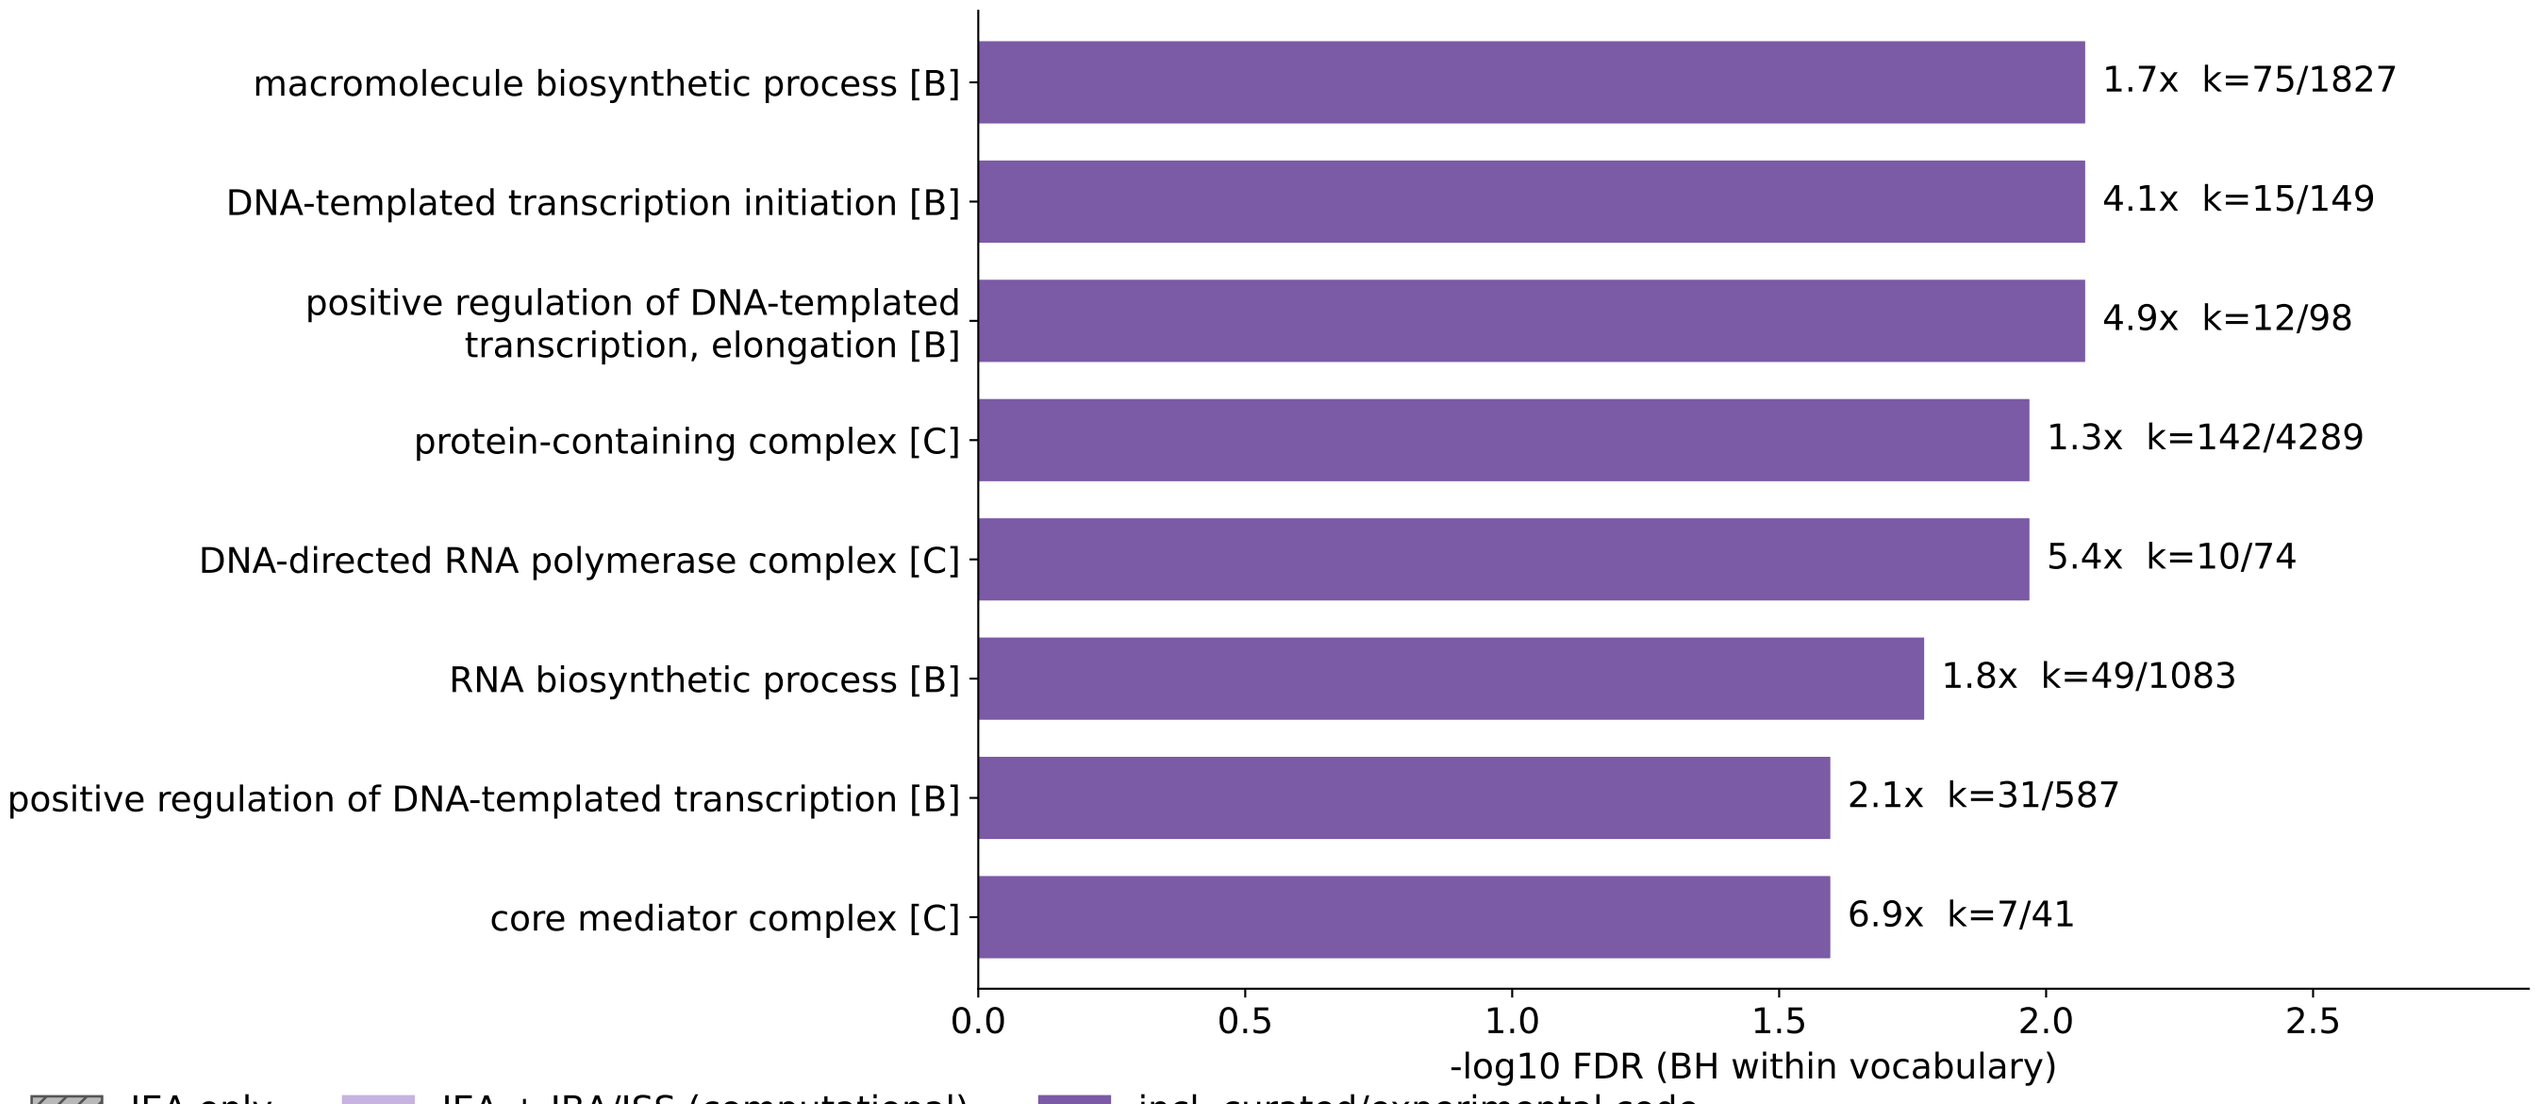
B Pfam families enriched in candidates (primary; family units on both sides)

732 terms tested; 3 at FDR<0.05; annotated units: 282 cand. / 11034 all



C GO terms (secondary; UniProt computational evidence)

4779 terms tested; 31 at FDR<0.05; annotated units: 295 cand. / 11884 all



Annotation: UniProt reference proteomes (Pfam, InterPro, GO); IN species without annotation contribute no annotated units. Universe: all proteins of the IN proteomes. Family units: candidate families from the pipeline; background clustered with mmseqs (0.3 id, 0.8 cov, cov-mode 0). One-sided hypergeometric; BH within each vocabulary. Bars: FDR<0.05 and k>=3 candidate units. Labels: k = candidate units with term / all units with term.
