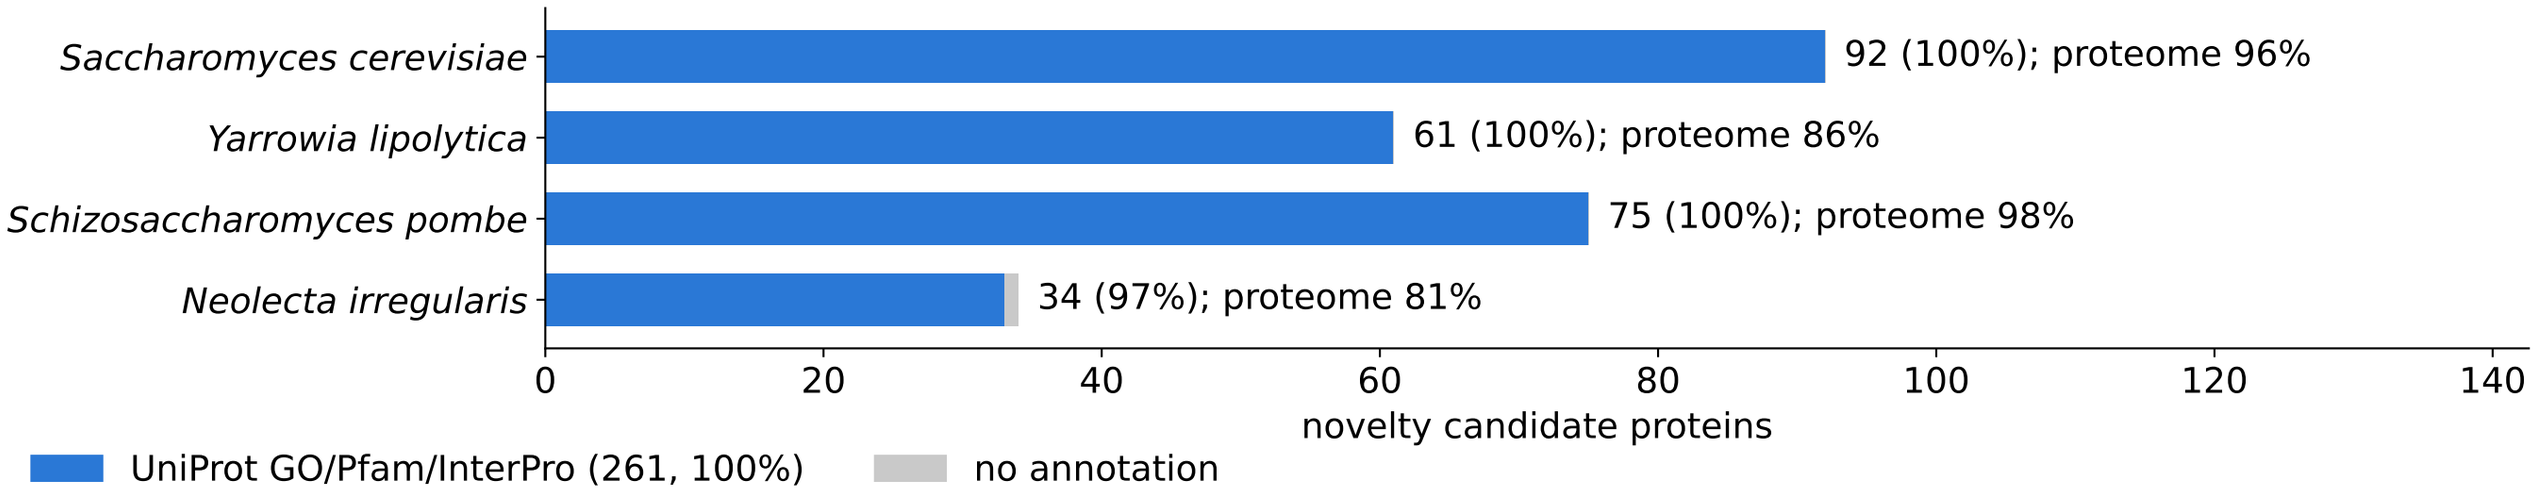
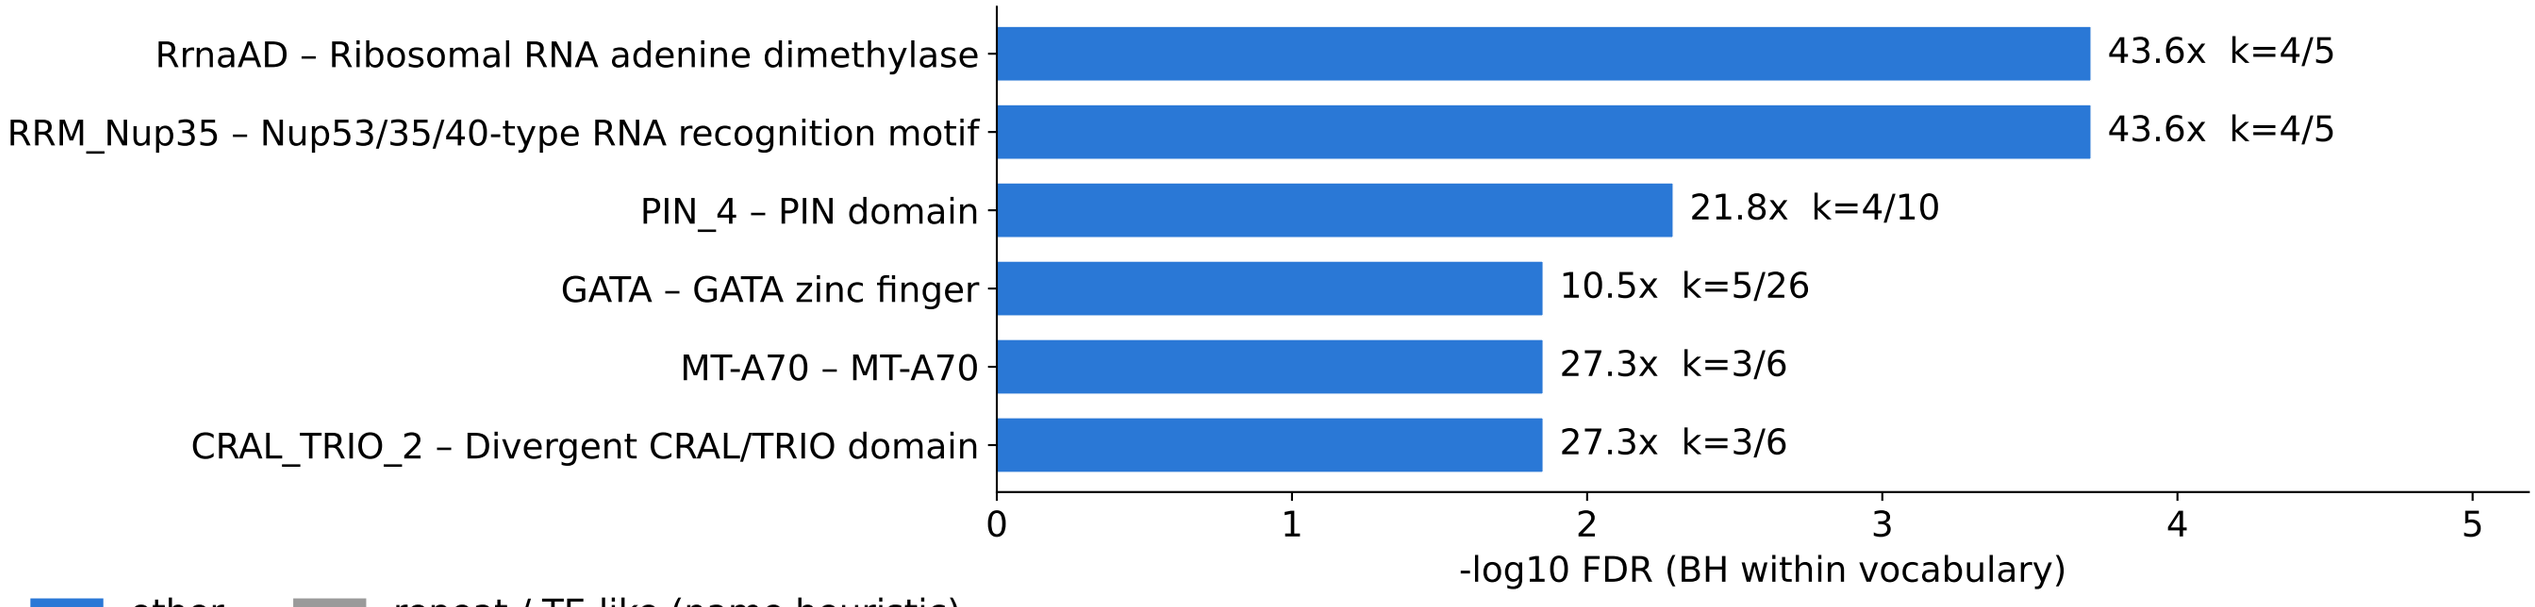
Yeasts (4 IN) vs filamentous Ascomycota (4 OUT): enrichment of novelty candidates (diamond pairwise, nf_NovInvenio main d03f5a2 run 2026-10-13)

A 262 candidates in 4 IN species



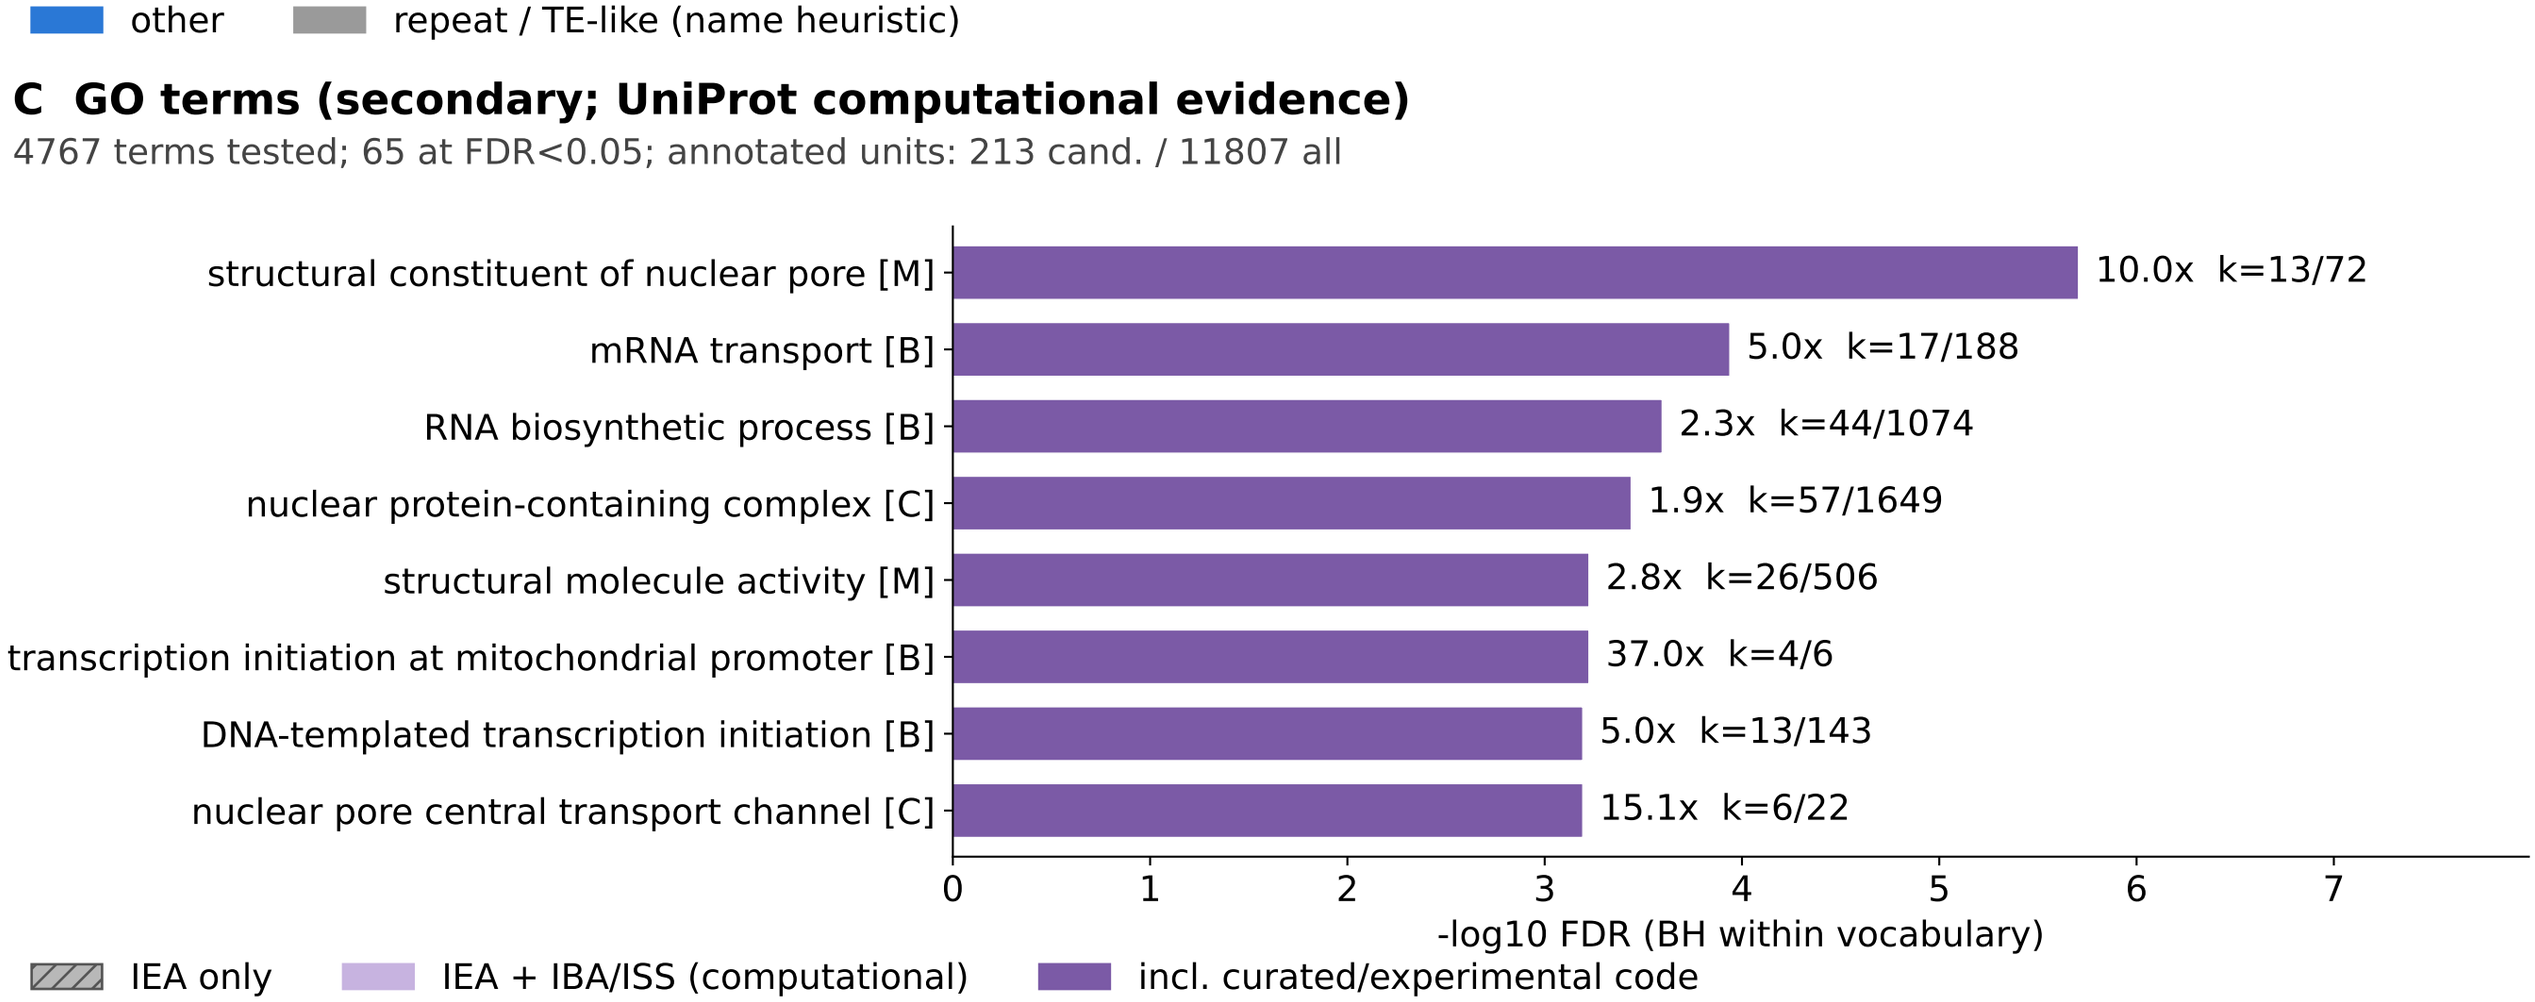
B Pfam families enriched in candidates (primary; family units on both sides)

724 terms tested; 6 at FDR<0.05; annotated units: 201 cand. / 10957 all



C GO terms (secondary; UniProt computational evidence)

4767 terms tested; 65 at FDR<0.05; annotated units: 213 cand. / 11807 all



Annotation: UniProt reference proteomes (Pfam, InterPro, GO); IN species without annotation contribute no annotated units. Universe: all proteins of the IN proteomes. Family units: candidate families from the pipeline; background clustered with mmseqs (0.3 id, 0.8 cov, cov-mode 0). One-sided hypergeometric; BH within each vocabulary. Bars: FDR<0.05 and k>=3 candidate units. Labels: k = candidate units with term / all units with term.
