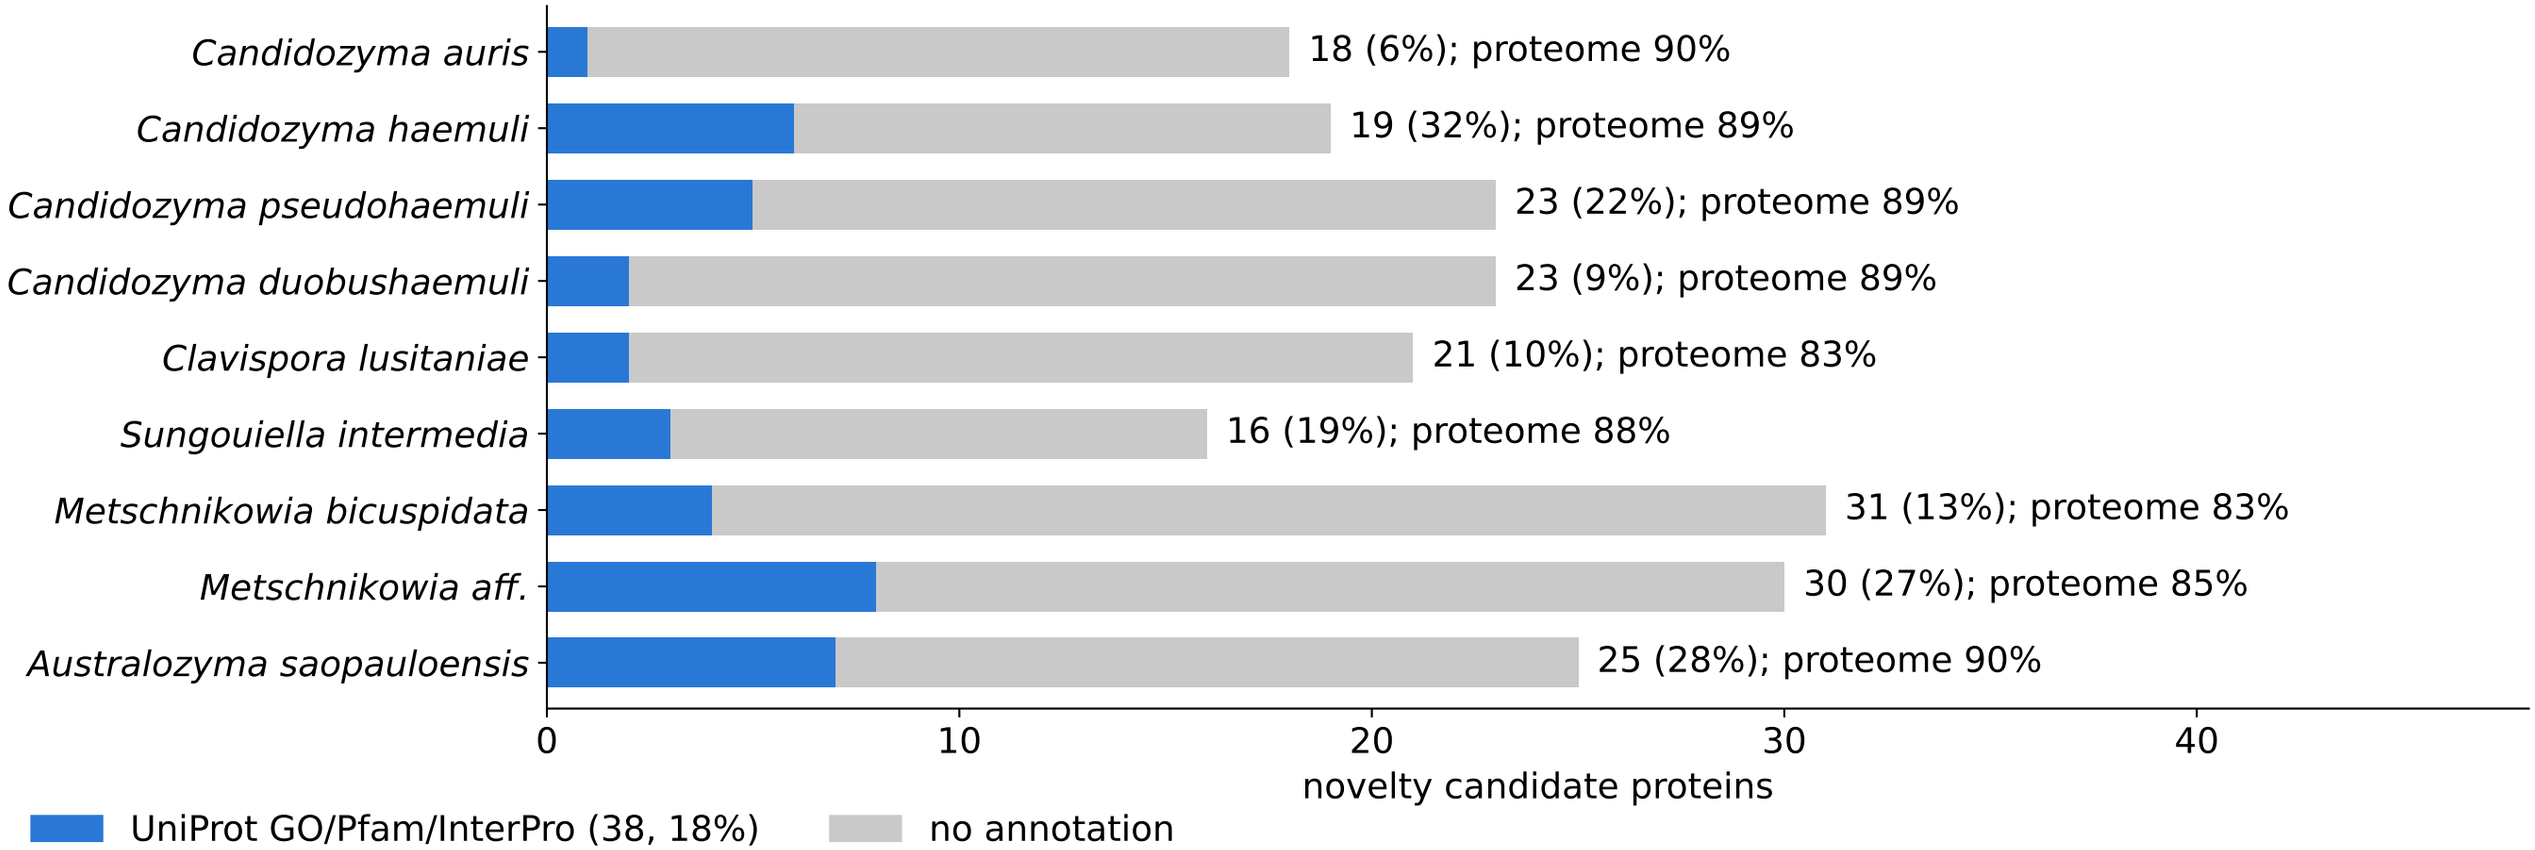
Metschnikowiaceae incl. C. auris (9 IN) vs OUT: enrichment of novelty candidates (diamond pairwise, nf_NovInvenio run 2026-10-11)

A 206 candidates in 9 IN species



B Pfam families enriched in candidates (primary; family units on both sides)

511 terms tested; 0 at FDR<0.05; annotated units: 12 cand. / 7337 all

No Pfam family passed FDR<0.05.

C GO terms (secondary; UniProt computational evidence)

3074 terms tested; 0 at FDR<0.05; annotated units: 8 cand. / 6807 all

No GO term passed FDR<0.05.

Annotation: UniProt reference proteomes (Pfam, InterPro, GO); IN species without annotation contribute no annotated units. Universe: all proteins of the IN proteomes. Family units: candidate families from the pipeline; background clustered with mmseqs (0.3 id, 0.8 cov, cov-mode 0). One-sided hypergeometric; BH within each vocabulary. Bars: FDR<0.05 and k>=3 candidate units. Labels: k = candidate units with term / all units with term.
