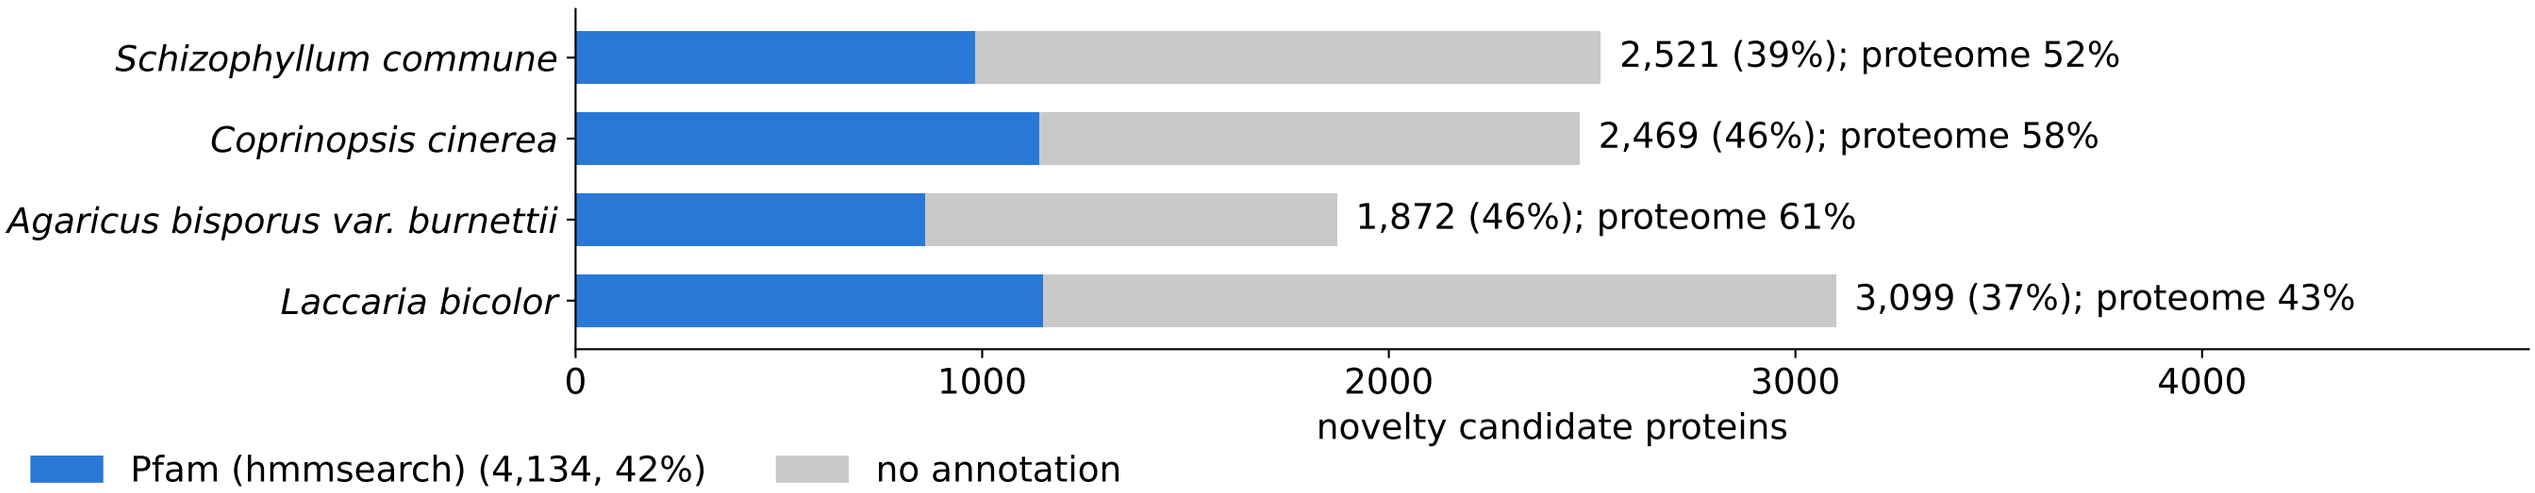
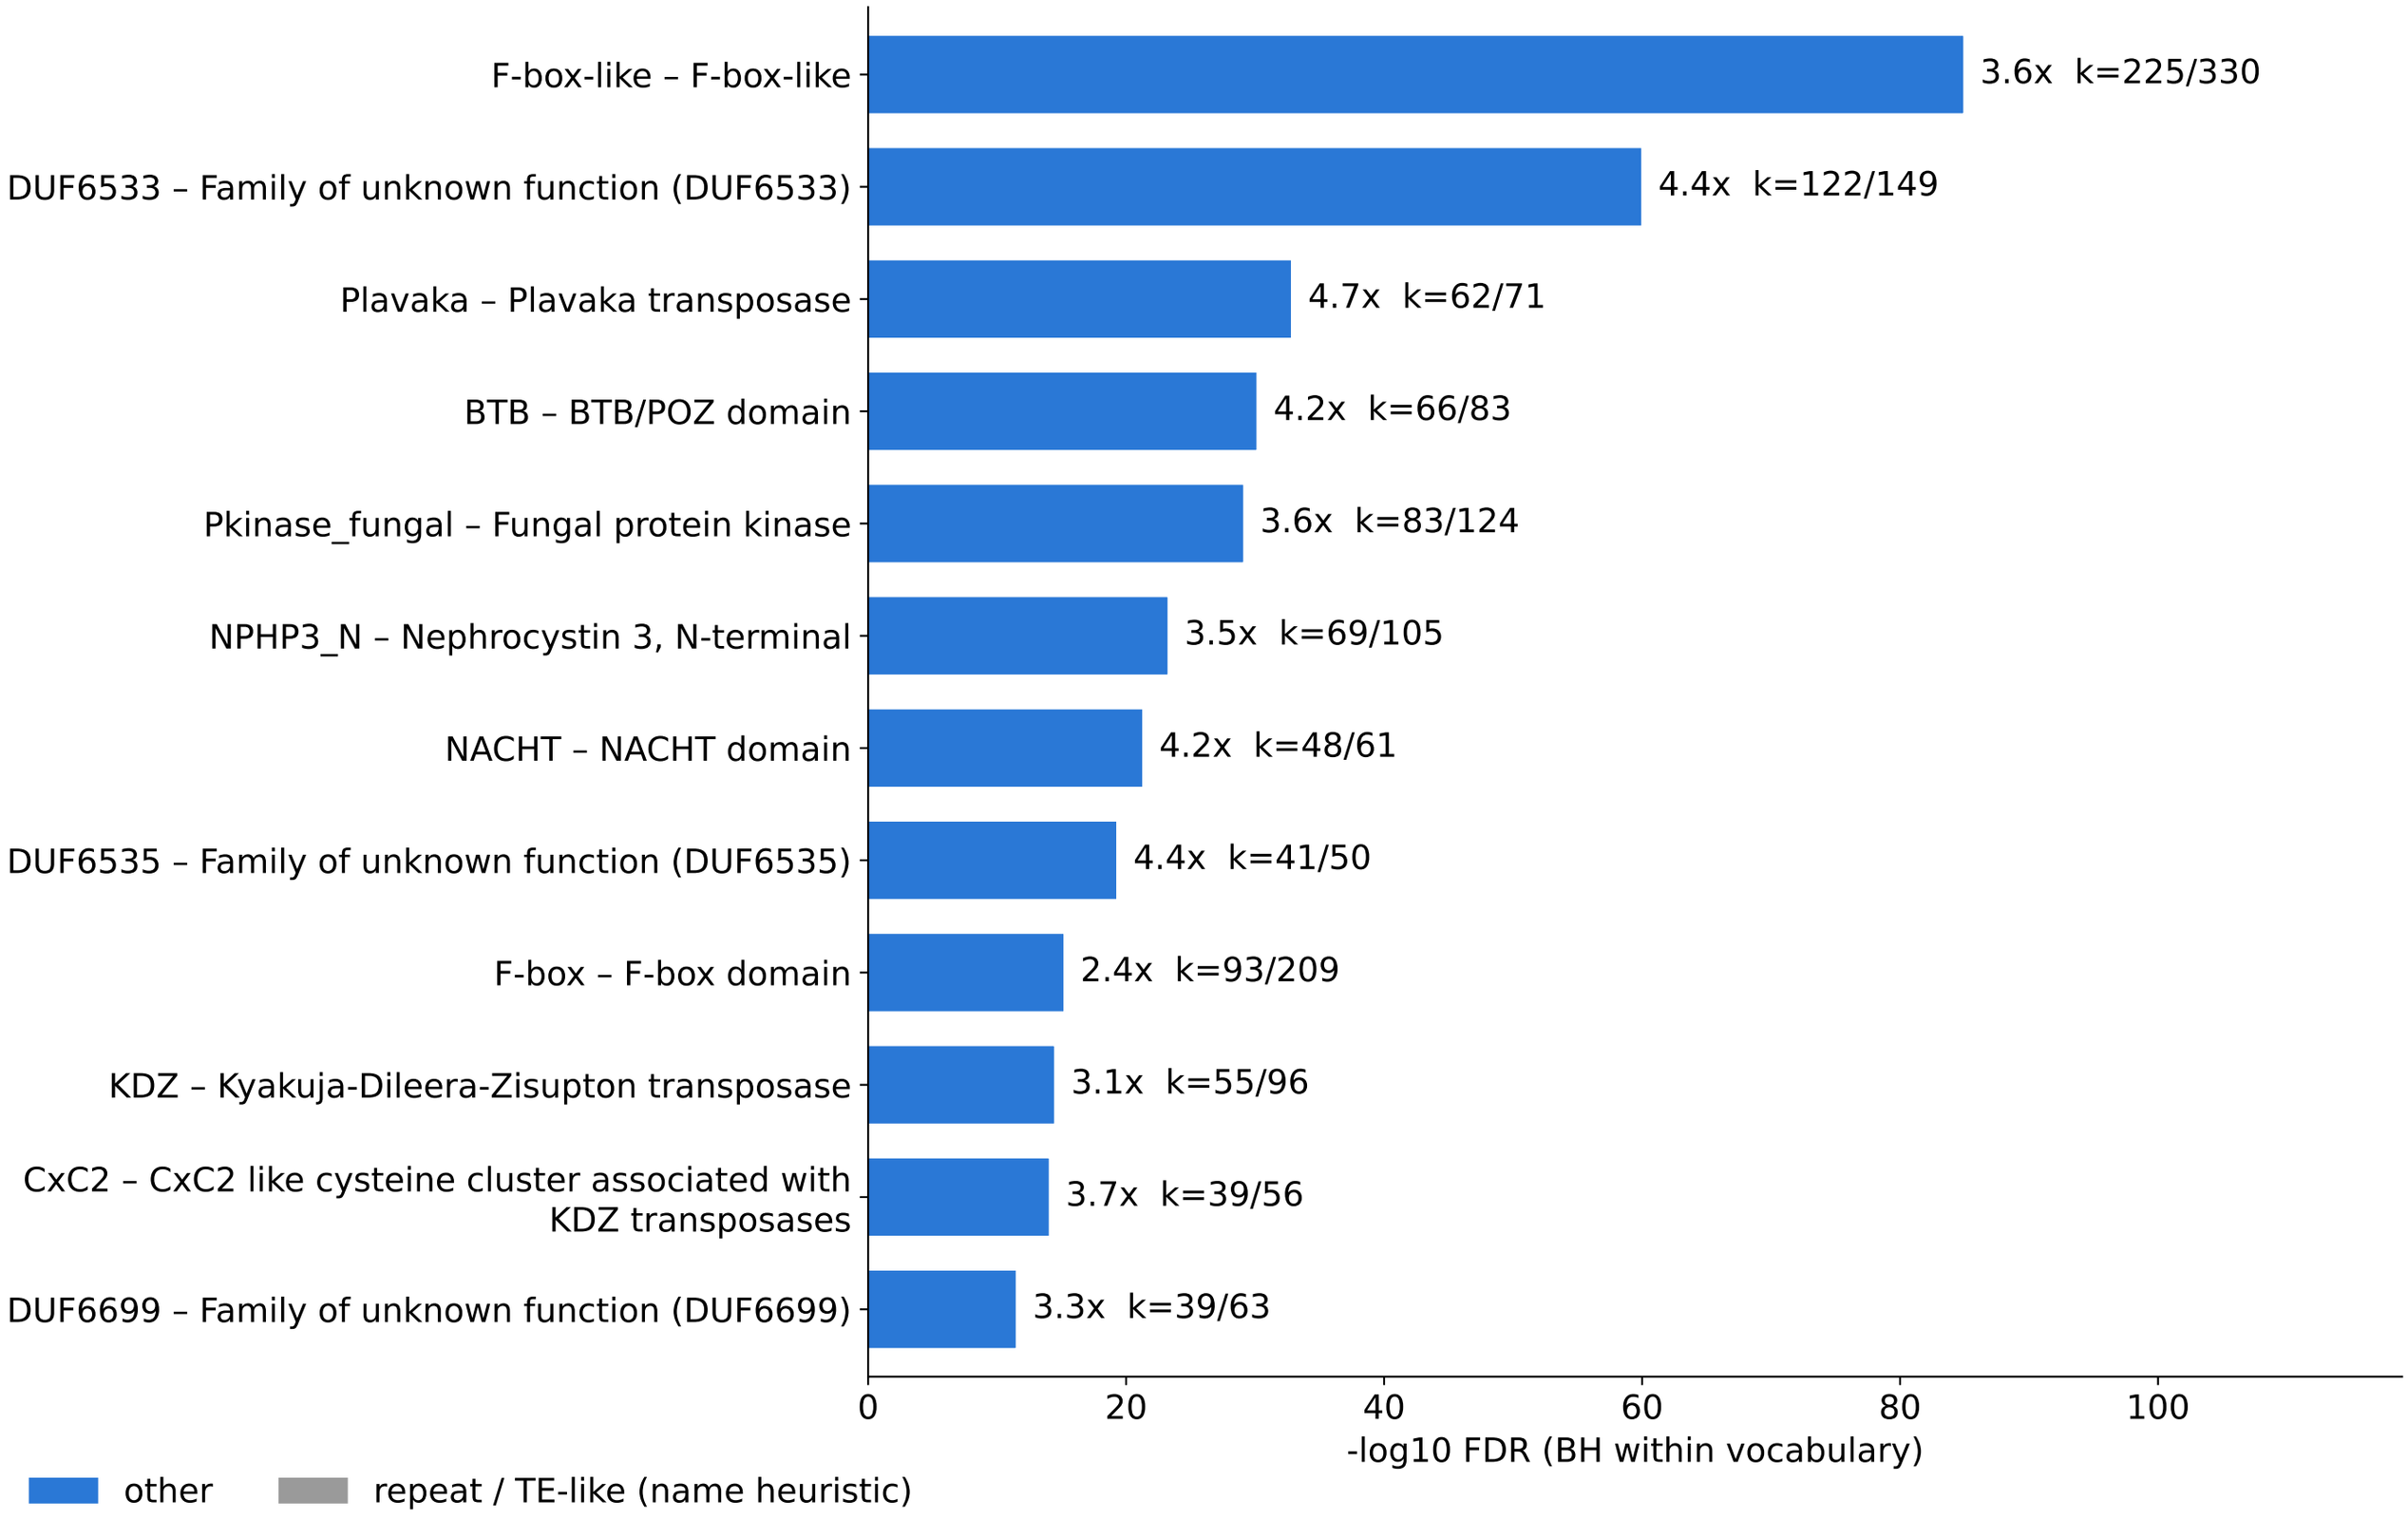
Agaricales (4 IN) vs other Basidiomycota (3 OUT): enrichment of novelty candidates (diamond pairwise, nf_NovInvenio main05fcf3a run 2026-10-08)

A 9,961 candidates in 4 IN species



B Pfam families enriched in candidates (primary; family units on both sides)

895 terms tested; 39 at FDR<0.05; annotated units: 2380 cand. / 12709 all



C GO terms (secondary; UniProt computational evidence)

not available: no protein in this study has a term of this vocabulary; no test run

GO terms not available: no GO term annotation in this study.

Annotation: Pfam-A hmmsearch (HMMER 3.4, --cut_ga, Pfam 38.2) of all 7 NCBI proteomes; GO and InterPro not available (no UniProt annotation). Universe: all proteins of the IN proteomes. Family units: candidate families from the pipeline; background clustered with mmseqs (0.3 id, 0.8 cov, cov-mode 0). One-sided hypergeometric; BH within each vocabulary. Bars: FDR<0.05 and k>=3 candidate units. Labels: k = candidate units with term / all units with term.
